PREFACE

EVER since Tinctor, about 1475, wrote the first music dictionary — the "Terminorum Musicae Diffinitorium" — there has been an endless succession of books dealing with musical definitions. This is but natural and proper, since the musical art is constantly changing, and a music dictionary, unless frequently revised, easily drops behind the times. The author has endeavored, in these pages, to bring together and classify such material as the modern music teacher or student needs to have at hand in an accessible shape, and to give, as far as possible, the latest developments in the field.

As the average teacher is often timid in the matter of pronouncing foreign words, an English phonetic spelling has been added in almost every instance. Yet it will be best for the student to familiarize himself with the rules for pronouncing each language (which are also given) since it is sometimes impossible to reproduce the exact sound of a foreign word in any English spelling. An attempt has also been made to give the pronunciation of the names of the chief composers, singers, pianists, conductors, etc.

These points, and the presentation of some of the chief popular errors in music, the addition of a list of works of reference for the most important topics, and the inclusion of some of the most recent details of research, may be sufficient excuse for the making of yet one more music dictionary.

GERMAN

VOWELS

A has the sound of ä as in *far*.

Au is like ou in *house*.

Ai occurs but rarely, and has the sound of ī as in *pine*.

Ae or **ä** when long is like ā in *mate*; when short it is like ĕ in *met*.

Aeu or **äu** is like oy in *boy*.

E has (1) the sound of ĕ as in *help*, and (2) the sound of ā in *hate*.

Ei has always the sound of ī in *pine*.

Eu is like oi in *loiter*.

I has the sound of ĭ as in *pin*.

Ie takes the sound of ē as in *tree*.

O has (1) a long sound as in *tone*, and (2) a short sound as in *loss*.

Oe or **ö** has a sound somewhat like e in *err*, pronounced with lips held close together.

U has the sound of oo as in *moon*.

Ue or **ü** has the sound of the French ü.

Y is used only in foreign words, where it does not differ from i.

CONSONANTS

B and **d** are pronounced as in English.

C is only used in foreign words. Before e, i, and y it is pronounced like ts; before other vowels and consonants it is like k.

Ch has nothing corresponding to it in English, though the Scotch word *Loch* gives it exactly. It is a guttural aspirate, bearing the same relation to k as th does to t. At the beginning of words ch is like k.

Chs is pronounced like ks or x.

F, **l**, **m**, **p**, **t**, and **x** are the same as in English.

G has the hard sound as in *got*. In some parts of Germany the unaccented, final *ig* is softened into something like *ikh*.

H at the beginning of words is aspirated; between two vowels the aspiration is very weak, and before a consonant or at the end of words it is mute; but in this case it makes the preceding vowel long.

J is equivalent to the English y in *yet*, and is always followed by a vowel.

K is like the English k, but is never mute before n.

Ng sounds like ng in length; but in compound words where the first ends in n and the last begins with g, they are separated.

Q is always joined with u, and together they are pronounced like *kw*.

Ph has the sound of f.

Pf unites the two letters in one sound uttered with compressed lips.

R has a stronger sound than in English, and is the same at the beginning, middle, or end of a word.

S is like the English s. It is sounded at the end of words, and between two vowels it frequently takes the sound of z.

Sch is like the English sh in *ship*.

Th takes always the sound of t; h being silent. It has never the sound of th in *thee*.

Tz intensifies the sound of z.

V is pronounced like f.

W answers to the English v.

Z is pronounced like ts in *nets*.

In the German words defined and pro-

nounced in this work, the accented syllable, in words of two or more will be in Italics.

ITALIAN

VOWELS

A is always like ä in *father*.

E has (1) the sound of ĕ in *pen*, and (2) the sound of ā in *fate*.

I is pronounced like ē in *me*.

J is always a vowel, and at the beginning of a syllable is like y in *you*. At the end of a word it is like ē in *be*.

O has the sound (1) of ō in *tone;* and (2) that of ŏ in *not*.

U has always the sound of oo in *cool*.

CONSONANTS

B, d, f, l, n, p, q, v, are the same as in English.

C, before a, o, and u, has the sound of k; before e, i, and y it has the sound of tsh, or that of ch in the word *cheek*. When doubled (cc) and followed by e, i, or y, the first is pronounced like t, and the second takes its usual sound.

Ch, before e or i, has the sound of k.

G, before a, o, or u, is hard as in *go;* before e or i, it has the sound of j or soft g as in *gem*. When doubled and followed by e or i, it has the sound of dj; or like dg in *lodge*.

Gh, followed by e or i, is pronounced like g in *go*.

Gl, followed by i preceding another vowel, is pronounced like lli in *million*.

Gn, followed by a, e, i, o, or u, is like ni in the English word minion.

Gua, gue, gui, are pronounced gwä, gwā, gwē.

Gia, gio, giu, are pronounced djiä, djiō, djioo, in one syllable, giving the i a very faint sound.

S has (1) the soft sound as in *sis*, and (2) the hard sound as in *ease;* usually the latter when occurring between two vowels.

Sc, before e or i, is like sh in *shall;* before a, o, or u, it has the sound of sk.

Sch is always like sk, or sch in *school*.

Scia, scio, sciu, are pronounced shä, shō, shoo.

R, at the beginning of words, is like the English; but at the end of words or syllables, or when combined with another consonant, it should have a rolling sound.

W and **x** are not found in Italian, except in foreign words.

Z has usually the sound of ts; it is sometimes pronounced like dz.

Italian words are pronounced exactly as written, there being no silent letter except h. The vowels always preserve their proper sounds, forming no dipthongs and being uninfluenced by the consonants with which they may be combined.

In words of two or more syllables there is usually a slight emphasis placed on the penult, or ante-penult, but rarely on the last syllable.

FRENCH

VOWELS

A has two sounds; ä as in *mass* and ă as in *bar*.

Ai is like ā in *fate*.

Au is similar to o in English.

E is (1) like ĕ in *met;* (2) like ā in fate; (3) similar to ŭ in *bud*. It is frequently silent at the end of words.

Ei is nearly like ā in *fate*.

Eu resembles e in *err*.

I has the sound (1) of ĭ in *pin* (2) of ē in *me*.

Ia has nearly the sound of ia in *medial*.

Ie is like ee in *bee*.

O is pronounced like ŏ in *rob;* and like ō in *rope*.

U has no equivalent in English, but resembles the sound of e in *dew*. By prolonging the sound of *e*, taking care not to introduce the sound of *w*, we get an approximate sound of the French *u*, or ü as it will be marked in this work.

Y, when initial, or coming between two consonants, or standing as a syllable by itself, is the same as the French *i;* but between two vowels it is equivalent to double i (ii), the first forming a dipthong with the preceding one, and the second with the one following.

M and **n,** when not nasal, have the same sound as in English; if preceded by a vowel in the same syllable, they are always nasal unless immediately followed by a vowel in the next syllable.

Am, an, em, en, are pronounced somewhat like *änh*.

Im, in, aim, ain, eim, ein, are pronounced like *ăn*.

Om and **on,** are like *ŏn*.

Um and **un** are pronounced like *ŭn*.

P is generally the same as in English. It is sometimes silent; and always when at the end of a word.

Q is usually followed by u, in which case they are together sounded like the letter k.

R is given more roughly than in English. It is often silent when preceded by the vowel *e*.

S has generally the same sound as in English; between two vowels it has generally the same sound as in the English word *rose*.

CONSONANTS

Final consonants are frequently silent.

B, at the beginning and in the middle of words, is the same as in English.

C has (1) the sound of k before a, o, or u; (2) when written with the cedilla, or before e, or i, it has the sound of s. C final is sounded, unless preceded by n, and has the sound of k.

Ch is pronounced like sh in *she*. In words derived from the Greek ch is pronounced like *k*.

D is the same as in English. It is often silent at the end of words.

F is like the English; when final it is usually sounded.

G before a, o, or u, is hard, as in *go*; but before e, i, or y, it has the sound of z in the English word *azure*. In the combination gue, or gui, the u is silent, but the g takes its hard sound.

Gn is pronounced like ni in *union*.

H is mute or slightly aspirated.

J is pronounced like z in *azure*.

K has the same sound as in English.

L has the same sound as in English, and ll the liquid sound as in *million*.

Sc is the same as in English. S final is generally silent.

T has its hard English sound, but in tial, tiel, and tion, it has the sound of s.

Th is always the same as t alone. T final is usually silent.

V is like the English, only a little softer.

W is found only in foreign words, and is pronounced like *v*.

X, initial, is pronounced like gz; it occurs but in few words.

Ex, at the beginning of words, is sounded like egz. In other places, and between two vowels, it is pronounced like ks.

Z is like z in *zone*.

Final consonants, which would otherwise be silent, are frequently sounded by carrying them over to the next word when commencing with a vowel.

VOWEL SOUNDS AS USED IN PRONUNCIATION

ä as in *ah;* ā as in *hate;* ă as in *at;* ē as in *tree;* ĕ as in *eh;* ī as in *pine;* ĭ as in *pin;* ō as in *tone;* ô as in *dove;* ŏ as in *not;* ŭ as in *up;* ü the French sound of *u*.

POPULAR ERRORS AND DOUBTFUL TERMS FOUND IN MUSIC

Andantino. This word is generally used by musicians in the opposite sense from its Italian meaning. While its strict meaning is *slower* than "Andante," of which word it is the diminutive, it is now commonly used to indicate a tempo *less slow* than "Andante"; a rate of movement between "Andante" and "Allegretto."

Appoggiatura. Although the English use the term *short appoggiatura* for the short grace note, it is generally called "acciaccatura" in Italy. See *Appoggiatura* and *Acciaccatura*.

Arsis and Thesis. These terms are not used by musicians in the manner that they are employed in poetic scansion. See both words.

Bar. The vertical lines drawn across the staff to mark the metrical units of the music are called *bars*, and the units between these bars are called *measures*. The terms are not properly interchangeable, though often carelessly used as if they were synonymous. The *bar* is the line itself, the *measure* the space between the bars.

Bar-line. A barbarism that has arisen from the mistaken but frequent use of *bar* for *measure*.

Catgut. No musical strings are made of catgut, although always called so. Guitar, Violin, and Harp strings are made of the intestines of sheep, lamb, or goat. See *Gut*.

Clarinet. The spelling of this word as "Clarionet" is obsolete. It is spelled "Clarinette" or, more frequently, "Clarinet."

Common Time. A rather faulty term for $\frac{4}{4}$ rhythm (or measure). There is a widespread error regarding the sign C which is *not* a "C" standing for "Common Time." See the article on *Time*.

Concerto. May be pronounced either as an Italian word (kontschairto) or as an English noun. "Soprano," "Scherzo," "Concerto," and numerous other musical words in constant use have become Anglicized in the course of time.

Concert Pitch. This is *not* the pitch used in our chief concerts. It is a very doubtful term. See *Pitch*.

Étude. This word is not pronounced "Etood" but "Ay-tüde, French *ü*, for since the English "Study" is its equivalent, it has not been adopted into our language.

Fantasia. The word is not pronounced "Fan-*tas*-ia" but "Fanta-*si*-a."

Flats and Sharps. These are used independently of the strict rules by almost all composers. Wherever a note is at all doubtful, the composer has a right to make its meaning sure by adding an accidental, even in defiance of the book rules.

Long Slurs. These are not amenable to any rules, almost every composer being a law unto himself in their employment in piano music. In vocal and violin music they are generally uniform, and have a more intelligible meaning. See *Slurs*.

M. M. This means "Maëlzel's Metronome" and *not* "Metronome Mark"

Mordent. Used in different senses by different teachers. See *Mordent*.

Obbligato. This word should *not* be spelled "obligato."

Piano. Although some modern dictionaries give only "pianoforte" as the noun, the word "piano" (as well as "pianist") has been sanctioned by usage.

Pitch. It is desirable *not* to write one-lined C as "C^1," but as $\overline{c}$, or c', and to be careful in every use of numerals

in designating pitch, for the scientific usage of the numerals, found in every work on Acoustics, is different from the above, and endless confusion may result. See *Tablature*.

Portamento. It is unfortunate that this word means one thing to the pianist and a totally different one to the vocalist and violinist. See *Portamento*.

Sextolet. This group is very frequently found, even in the works of the great masters (Beethoven, Mozart, etc.) where two triplets are required. It is the most vague of the artificial groups. See NOTES.

Swell Mark. The mark  is sometimes found on a single chord in piano music. It is here misemployed as an accent. In vocal exercises the swell is sometimes found in the *first lesson*. It ought not to be taught until the pupil has obtained good control of the breath, — after some months of practice.

Symphony. It was only after the advent of Haydn that this word began to mean a sonata for full orchestra. Before that time it meant a prelude, postlude, or interlude, or any short instrumental work. In an old English dictionary (Grassineau, 1740) we read: "Some there are who restrain Symphony to the sole music of instruments: In this sense they say that the *Recitatives* of such an Opera were intolerable, but the *Symphonies* excellent." In the earliest dictionary of Musical Terms in the English language (Brotherton, London, 1724), we find the word defined, — "*Symphony*, by which is to be understood Airs in two, three, and four Parts, for Instruments of any kind; or the Instrumental Parts of Songs, Motets, Operas, or Concertos, are so-called." It was in this sense that Handel used the word in his "Pastoral Symphony," in "The Messiah," and Bach gave forth his Three-voiced Inventions first, under the title of *Symphonies*. It may also be stated that the Italian word "Sinfonia" is often mispronounced "Sin-*fo*-nia." It should be "Sinfo-*ni*-a."

Tie. There are many teachers who regard the following (with a dot over the second note) as a *tie*, and sound a single note only; but the consensus of opinion is that it is to be regarded as a *short slur*, and the second note is to be struck. Some teachers make a distinction between cases where the dot is *over* or *under* the slur, striking the second note in the latter case only.

Time. The misuse of this word is so universal that it may be accepted as correct by general usage. Yet it is to be desired that there should be one word for the speed of the composition and another for its rhythm. See *Time*, *Rhythm*, and *Metre*.

Turns. Turns are very often printed *over* short dotted notes when intended to be played *after*. See *Turn*.

Violoncello. This word should never be spelled or pronounced "Violincello." See *Violoncello*.

Waltz Rhythm. Although this is almost always written $\frac{3}{4}$, its actual pulsation is generally $\frac{6}{4}$, two measures forming the measure unit.

ADDENDA

Accidentals. There is an old rule that if the last note of a measure is marked with an accidental, and the first note of the next measure is of the same pitch, this latter note is also affected by the accidental; this rule is obsolete and should never be taught. The effect of the accidental *ends* at the *bar* unless the note is *tied* into the next measure.

Abbreviation marks. 1. Oblique strokes which distinguish the *eighth*, *sixteenth*, or *thirty-second* notes, when applied to the stem of the *quarter* or *half-note*. signify as many repetitions of the shorter note thus indicated as are equal to the longer note represented. Thus

2. A diagonal stroke with a dot each side signifies a repetition of the preceding measure.

3. When the long notes are subdivided, the oblique strokes, distinguishing *eighth*, *sixteenth* notes, etc., are sometimes employed to denote a repetition of such short notes: Thus, indicate a repetition of eighths, sixteenths, thirty-seconds, respectively.

4. A short horizontal line, a row of dots, or a waving line is used to express the repetition, or a continuation of the influence, of the preceding character. Thus:

6. Groups of notes are sometimes abbreviated as follows:

9. "Come Sopra" is sometimes used as an abbreviation, meaning to play the same notes as the part written above.

10. On concert programs certain abbreviations serve to identify an old work, composed before the opus-number was regularly used. These marks are often met with in connection with Mozart and Haydn compositions. Thus *P.* means Peters edition; *B. & H.*, Breitkopf & Haertel; *K.*, Köchel's catalog of Mozart's works. *B. & H.* 10—No. 10 Breitkopf & Haertel's edition: *K. 8*, No. 8 in Köchel's catalog.

(Zwischensatz) intermediate theme; Schls. (Schlusssatz) closing theme; Rg. (Rückgang) returning passage; Ug. (Uebergang) transition; D (Durchführung) or Ds. (Durchführungssatz) development; Ms. (Mittelsatz) middle part; and Anh. (Anhang) Coda.

Abbreviations of Hymn Metres are as follows: L.M., Long Metre; C.M., Common Metre; S.M., Short Metre; L.P.M., Long Particular Metre; C.P.M., Common Particular Metre; S.P.M., Short Particular Metre; L.M.D., Long Metre Double; C.M.D., Common Metre Double; S.M.D., Short Metre Double; H.M., Hallelujah Metre. Accent. A stress or emphasis upon a certain note or passage to mark its position in the measure, or its relative importance in regard to the composition.

Accent is the force given to certain notes or chords greater than that upon the surrounding notes or chords. It can be either natural or artificial. The natural accent is indicated only by the rhythm-mark, since the succession of natural accents constitutes the rhythm. Yet not all of the natural accents are alike in stress. The primary accent, which falls upon the first beat of the measure in all rhythms, is called *Thesis* by musicians, although the term is not used with etymological correctness (see *Thesis* and *Arsis*). If there is a secondary accent in the measure, as the third beat in $\frac{4}{4}$ rhythm, or the fourth beat in $\frac{6}{8}$ rhythm, it is called *Arsis*. In some rhythms these are not clearly indicated by the figures attached. Thus, in many a $\frac{3}{4}$ and $\frac{3}{8}$ rhythm the first measure presents *Thesis*, and the second measure *Arsis*, thus making (especially in waltz rhythms) a sextuple rhythm out of what appears to be triple. Artificial accents generally interrupt the rhythm and require especial signs. In piano music these represent two opposite styles of touch, — the pressure and the percussive stroke. In general music they can be classed as either explosive or resonant (without explosive character). The pressing, or resonant accents are chiefly represented by the following signs, — *Rf*, *Rfz* (see *Rinforzando*), *tenuto* (—) *marcato* (▾) and *Portamento* () although the last is decidedly misleading in its application. (See *Portamento.*)

The percussive, or explosive accents have the following signs: ∧ > which have practically the same significance, unless used side by side, when the first is made the stronger; *sf.* or *sfz.* (See *Sforzando*) and *fz* (see *Forzando*). The staccato mark (see *staccato*) is sometimes used merely as an accent mark (percussive) as may be seen in the closing theme of Beethoven's "Sonate Pathétique," first movement, and in much other modern music.

Acciaccatúra (It.) (ät-tshē-äk-kä-*too*-rä.) A very short grace note; an accessory note placed before the principal note, the accent being on the principal note. The short grace note, or acciaccatura, or short appoggiatura, as it is variously called, receives as little time value as possible, and no accent. If a note is written to be played simultaneously with its principal note, that note should be struck with the grace note; the following examples may explain this:

Occasionally there may be deviations from this rule, but they are rare. As there are many misprints made in the notation of grace notes, it will be well to remember that the long grace note (appoggiatura) is yearning and tender in effect, while the short grace note is bright and crisp, with the single exception of sometimes imitating a sob in mournful or plaintive music. See *Appoggiatura.*

Accompaniment. (Ger. *Begleitung*, Fr. *Accompagnement*; It. *Accompagnamento.*) The accessory parts which support the principal part or parts of a composition. The principal parts may be either vocal or instrumental. The accompaniment is almost always instrumental. An accompaniment may be intended to assist the singer, to assure correct intonation, or it may be composed to enhance the musical beauty of the work. A necessary accompaniment is called *obbligáto.* Some accompaniments, marked *ad líbitum*, can be omitted at the will of the performer or conductor.

Additional Accompaniments are parts added to a composition by an editor. These are sometimes very necessary. Some of the instruments, for which Bach and Handel wrote, are now obsolete, and their place must be filled by other instruments added by a modern hand. Neither of these two composers used the clarinette, which was very primitive in their day, and all clarinette parts in their works have been added since their time. Some of their scores were left in a mere outline state, so that the filling in of additional parts became a necessity. The writing of additional accompaniments began as early as the time of Mozart.

Acoustics (Ger. *Akustik;* It. *Acustica;* Fr. *Acoustique.*) The science of sound; the science treating of the laws of sound. A few facts connected with musical acoustics may be here stated as briefly as possible: All sound is vibration. Sounds produced by musical instruments or by voices are vibrations of air. Irregular or abrupt vibrations produce noise. Regular and continued vibrations produce tone. The piano or violin string vibrating, imparts its pulsations to the air. The speed of sound through the air is about 1,100 feet per second. It takes about five seconds for sound to travel a mile through the air. Sound travels quicker in warm, damp air, slower in cold, dry air, but tone is clearer and more beautiful in cold, dry air because the atmosphere is more elastic, the particles lying further apart, and vibrating more freely. Pitch is merely rate of vibration. The higher the tone the quicker the vibrations. The proportion of rapidity in different musical intervals was known in ancient Greece, possibly, even in Egypt. If musical intervals are tuned according to the laws of nature, in two

tones an octave apart, the lower one will vibrate one-half as quickly as the upper one. If they are a perfect fifth apart, the lower one will vibrate two-thirds as quickly as the upper one, in a perfect fourth, three-quarters, etc. Most of our musical intervals, however, deviate more or less from the proportions indicated by nature. (See *Tempered Scale.*) The human brain cannot perceive tone at a slower rate than 16 vibrations per second. Most human brains cease to hear tone before it reaches 38,000 vibrations per second. The latter figure would represent a tone four octaves above the highest E-flat of the pianoforte. The total compass of pitch possible to an acute mind would be about eleven octaves and a minor third. The deepest tone audible is sub-contra C, produced by an open pipe 32 feet long, or a stopped pipe 16 feet long, upon the organ. The quality of musical tones depends upon the blending of faint, high tones, called overtones, or harmonics, with the chief tone heard. These harmonics are always present when we hear a musical tone. They occur in a regular order, but with varying degrees of intensity. They form a chord (called the Chord of Nature) above every tone that is sounded. Their full significance was first thoroughly explained by Helmholtz, although their presence had been noted almost three centuries ago. They are formed by the regular subdivisions of the sound-wave into halves, thirds, quarters, and other aliquot parts, sounding the octave, twelfth, fifteenth, etc., of the fundamental tone. When these over-tones are in good proportion, the lower ones full-toned and the upper ones faint, but clear, the result is a rich and pleasing tone. When the upper ones are too strong the result is a twangy, penetrating and irritating tone, like that of the harmonica, or of a worn-out piano. When all the overtones are faint, the result is a dull, or lifeless, or muddy tone, such as is given by the stopped diapason of the organ. Without the overtones, all musical tones would have precisely the same quality, no matter what instrument they were sounded on. We can alter the proportion of the overtones and make a tone brighter or duller on a string instrument by striking, plucking, or bowing at different points. The nearer the center the point of contact the hollower the tone; the nearer the end of the string, the brighter. A conical pipe or tube gives all the overtones clearly, and hence has a brighter tone than a cylindrical one, which gives fewer overtones. See also, *Pitch*, *Tempered Scale*, *Harmonics*. Books recommended upon this topic are Blaserna's "Sound and Music," Zahm's "Sound and Music," Pole's "Philosophy of Music," the "Student's Helmholtz," Tyndall's "On Sound."

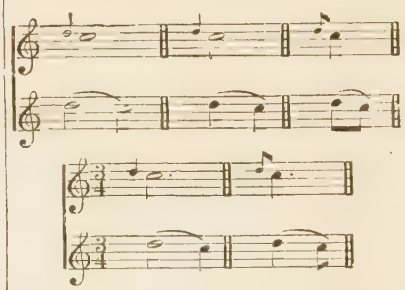
Appoggiatura (It.) (äp-pŏd-jē-ä-*too*-rä.) Leaning note; grace note; note of embellishment. See below.

Appoggiatura, compound. An appoggiatura consisting of two or more grace notes or notes of embellishment.

Appoggiatura, inferior. An appoggiatura situated one degree below its principal note.

Appoggiatura, superior. An appoggiatura situated one degree above its principal note.

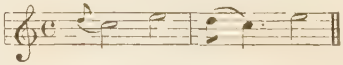
The word "Appoggiare," to lean against, accurately describes the character of this long grace-note. It is one of the most charming embellishments of song and of instrumental music. The cause of writing so long and accented a note as a grace note, lies in the fact that the appoggiatura is almost always extraneous to the melody and to the harmony. As there are many misprints made in this connection it will be well for the musician to remember that the character of the appoggiatura is almost always yearning, sorrowful or tender. It has become customary, in recent days, to write the appoggiatura out in full notation. This obviates many mistakes, but it does not always present the character of the progression. Before an even note the appoggiatura generally receives its face value, *i. e.* one half the value of the note which follows. Before a dotted note it receives more than its face value, *i. e.* it should be given two-thirds of the value of the following note.



If the next note is of the same pitch as the principal note of the appoggiatura, the grace note receives the entire value of its principal note, but is carried to the next note with a strong portamento.

This occurs chiefly in vocal music.

An old rule chiefly used in Italy gave to the appoggiatura its face value even when this was less than half the value of the principal note. Thus:



But this rule is seldom applied nowadays. The appoggiatura effects in many of the works of the old masters have been changed into full notation by modern editors.

It will be noticed that in all cases the appoggiatura is to receive at least half of the length of the note as well as the accent. The principal note (the note following the grace note) is to be made light and short. It will not be wrong sometimes to increase the value of the appoggiatura and decrease the principal note proportionately. The appoggiatura is sometimes called the long grace-note. Some dictionaries (Grove and others) call the short grace-note "appoggiatura" also; for the use of the *short* appoggiatura see *Acciaccatura*. Confusion can here be avoided by using the English equivalents — "*Long grace-note*" and "*Short grace-note*." Authorities to be consulted on this subject are Stainer and Barrett, and Dannreuther's "Musical Ornamentation."

Scarlatti may be regarded as the founders of the *Da Capo Aria* in three large divisions. Div. I was generally brilliant and powerful. Div. II of *Cantabile* character in contrast of style and key. After this there came a literal repeat of Div. I. "He was Despised" is an example of this aria. When the repeat of Div. I was varied, a better form resulted. See "Rejoice Greatly" for this varied return. Sometimes the aria was in two contrasted divisions without return, as in "I know that my Redeemer liveth." Modern composers sometimes use an abbreviated return of first division, as, for example, Mendelssohn in "Oh God, have mercy," or in "It is enough."

C

C. The first note of the natural scale. The note *Ut* of the Guidonian System. (See *Aretinian Syllables.*) The note from which pianos and organs are tuned. It would be impossible to tune the orchestra from this note since the violin has no C string. There are therefore two different tuning-forks used, an A fork for orchestra and a C fork for piano and organ. Sometimes students are puzzled why the natural scale should begin on C instead of with A, the first letter of the alphabet. Although the origin of the letter system is involved in some obscurity, and letters have been applied to musical tones even in ancient Greek times, yet the answer to the above may be found in the fact that the minor scale was more used in ancient times than the major — and the natural minor scale begins with A.

C is called *Ut* in France and *Do* in Italy. It is an error to suppose that the sign ¢ is C as an abbreviation for "Common Time." The sign came from a broken circle, used in the middle ages and called the *Imperfectum.* See *Time.*

Cadénza (It.) (kä-*den*-tsä.) } dence; an ornamental passage introduced near the close of a song or solo, either by the composer or extemporaneously by the performer. In the concerto, however, the cadenza reaches its largest form, being sometimes a dozen pages in length. It is generally not printed in the composition, but published separately, even when written by the composer of the work itself. It is often composed by the artist who performs the concerto. It is a brilliant technical display, developing themes of the composition. It is introduced in the coda of the first and last movement of a concerto, its place being signified by a hold 𝄐 placed over a dominant chord, or a $\frac{6}{4}$ chord of the tonic. Beethoven, in his last piano concerto, declined to allow a solo cadenza, and Brahms and other modern composers have sometimes receded from it.

Canon. The strictest form of contrapuntal composition, in which each voice imitates exactly the melody sung or played by the first voice. The word is derived from "Canone," a rule or law. Canon was the earliest form of skilful composition. The oldest existing contrapuntal work of merit is a canon entitled, "Sumer is icumen in," which is for four voices, and is supposed to have been composed about A.D. 1200. Canon may be defined as the strict imitation of a melody throughout. The imitating voice, or voices, may enter above or below the subject, or sometimes upon the same degree. In the last case, the canon is called a Round. The imitation may enter at any interval, from a second, above or below, to a double octave, or fifteenth. Thus, "A canon at the fifth," would be imitated at the fifth, above or below. The imitation may enter at any time-distance after the first voice has begun, yet it ought not to come many measures after, since in such a case it would be difficult to follow the imitation. A single measure, or two measures, is best, since if such an even distance is taken the imitation preserves the same rhythmic construction of measures as the subject. Most canons are two-voiced (consisting of subject and imitation) at the octave (above or below), and are at one or two measures time-distance. The subject of the canon is sometimes called Antecedent, and the imitation Consequent. The canon was called "Fugue," by the oldest contrapuntists. When more than one voice is used in imitation, it is sometimes best to use different intervals for the imitations; one voice imitating at the octave, another at the fifth, etc. A double canon is two canons going on simultaneously, and consequently has at least four voices. See the Requiem at the close of Schumann's "Manfred," for a short example of double canon; also Bach's organ prelude on "In dulci jubilo." See also Richter, Chadwick, Jadassohn, Goetschius, works on Counterpoint.

Cantate (Ger.) (kän-*tä*-tĕ.) } vocal composition of several movements, comprising airs and recitatives; a short oratorio or operetta without action. A cantata consisted originally of a mixture of recitative and melody, and was given to a single voice, but the introduction of choruses altered the first character of the cantata, and gave rise to some confusion in the manner of describing it. Therefore it has been variously defined. A cantata is now generally understood to be a short work somewhat like the oratorio, but without characters. But the word is still used

Chromatic signs. Accidentals; sharps, flats, and naturals. The chromatic signs used in modern music are the sharp (♯), the flat (♭), the natural (♮), the double sharp (𝄪), and the double flat (♭♭). The natural, or cancel, can annul the effect of a double sharp or a double flat, but if we desire a note to be flatted, after using a double flat, we must write (♮♭), and if sharped after a double sharp, (♮♯). The chromatics are also called "accidentals." The flat was the first of these signs in music, and was used to indicate the position of a single note — B — which was sometimes sounded as B, and often "softened" into B flat. This was about A.D. 1000, when the letter notation was in use, and ran (for the scale of C) as follows: c, d, e, f, g, a, b, ┗┐, c. The round b, called *b rotundum*, was b-flat, the square b (┗┐), called *b quadratum*, was b-natural. In Germany, the note b-flat is still called B, and as the square b (┗┐) was mistaken for an h (of the German print), it was called "H" and is called so to-day, a clerical error that has been perpetuated nearly a thousand years. After some time the

two *b's* were used as chromatic signs. The sharp came in later and was originally a St. Andrew's cross (♯). Double sharps and double flats only came into free use in music after Bach, with his "Well-tempered Clavichord" (Part I, 1722; Part II, 1742), had brought in the use of all the keys in modulation and composition. In the music of the seventeenth century, the effect of a flat was generally annulled, not by a natural, or cancel, but by a *sharp*, and *each* accidental was written as it occurred. To-day the effect of the accidental extends through the measure, on all subsequent notes of the same pitch, but it is often allowed to apply to the same note an octave higher or lower, if written on the same staff. There are many redundant and unnecessary chromatic signs employed in music, for this rule is followed by almost every composer — *If a note can for any reason be considered doubtful, make its meaning sure by using an accidental!* — See Elson's "Theory of Music."

All clarinets, the one in C excepted, are transposing instruments; they do not sound the notes which are written. The B♭ clarinet sounds a tone lower, and the A clarinet a minor third lower. Besides the above-mentioned clarinets, there is a bass clarinet (see *Clarinet, Bass.*) The lowest register of the clarinet is hollow-toned and spectral. It is called "Chalumeau." Clé (Fr.) (klā.) }
Clef } A key; a character used to determine the name and pitch of the notes on the staff to which it is prefixed. The clefs began in music about A. D. 900. There were then no notes, but certain characters called neumes, without definite pitch, indicating the rise and fall of the voice and its general progression. Through these a red line was drawn and marked "F." The F clef was thus the earliest clef. Soon after (before 1000), another line, generally green, was drawn above it and marked "C." Originally all the clefs were letters, and all were movable. The following are used in music to-day: — The G clef, placing $\overline{g}$ on the second line, thus ; the bass, or F clef, placing f on the fourth line, thus ; these two are now fixed, immovable clefs. The c clef, which fixes the position of middle c, or $\overline{c}$, is a movable clef, and is used to-day, as follows:

Soprano clef

Alto clef 
Tenor clef 
and often in America

The object of such a moveable clef is to avoid leger lines above or below the staff. The c clef is sometimes varied in shape, as or . In old music the following are sometimes found:—Mezzo soprano clef

French violin clef and the baritone clef

The following is a recent use of the tenor clef: and signifies that the notes

are to be played an octave lower than in the G clef. In Italy this clef is at present written , a tenor and G clef combined.

Concerto (It.) (kon-*tschair*-to); (Ger.) Konzert (kont-*sairt*). Also pronounced as an English word — concerto. Originally the term was applied loosely to almost any kind of concerted music. Viadana used the term for motets with organ, in 1602. The real inventor of the concerto, as an instrumental concerted form, was Torelli, who, in 1686, wrote concerted works for two violins and basso. The form was developed along the lines of the old sonata, by Corelli, Geminiani and Vivaldi. The old concerto, in the time of Bach and Handel, were much like an orchestral suite, and the form was much freer than it became later. With Mozart the concerto took the classical sonata-form, although it is still the freest presentation of this classical form of music. The central idea of the concerto is the display of a solo instrument, or sometimes more than one. There are concertos for almost every instrument, but the piano concerto is the most successful and the most numerous. Among masterpieces in this form one may mention the "Emperor" and the fourth concerto, by Beethoven; the two piano concertos, by Brahms; the two by Liszt (rather rhapsodies than

concertos); the A minor, by Schumann; the great violin concerto, by Beethoven; the violin concerto, by Brahms; etc. There is a concerto for harp and flute by Mozart, and one for violin, violoncello and piano by Beethoven, illustrating the use of two or more instruments simultaneously. There are even concertos for the kettle-drums! While the concerto is intended to display the solo instrument, it should still give an orchestral impression. The last concertos by Beethoven, and all of those by Brahms, are symphonic in their effect, although giving great difficulties to the solo artist. The two concertos (*concerti* is the Italian plural) by Chopin, spite of their great beauties, have the fault of being too entirely piano compositions. Sometimes the concerto movements are continuous. The regular number of movements is, however, three, the minuet or scherzo of the full sonata form being omitted. See also *Cadenza*. Conductor. A director or leader of an orchestra or chorus. The earliest conductors were found among the Assyrians, to regulate the rhythm of the songs or dances. They conducted with two sticks, one of which they beat against the other, and so marked the time or accent. Among the Greeks the Coryphœus led the dance and chorus, and in everything requiring united action, by his beating of time, by stamping with a leaden shoe, held his forces together. In the middle ages the conductor led with a long staff, with which he beat the ground, and occasionally the musicians. The word, in connection with music, has several applications. It generally signifies one who directs with a bâton the performance of a band of players. It is also applied to one who accompanies vocal or instrumental pieces on the pianoforte. A conductor, as an independent time-beater, was not known until the end of the eighteenth century. The player who sat at the harpsichord gave the time to the leader of the band, who, directing his subordinates, was called conductor. The art of conducting is comparatively young. The bâton was not used until after 1800. Weber and Spohr were among the very first conductors to use it. Mendelssohn and Berlioz were probably the first great conductors in the modern sense. The conductor is far more than a mere drill-master. He is the poet of the orchestra. It is his conception of the work that is produced; he plays upon his orchestra as an organist upon his manuals and pedals. The art of conducting is far more advanced at present than it has ever been in musical history. It is not necessary that the conductor should be a composer; spite of the fact that some composers have been famous as conductors, the composer is apt to become wedded to some particular school, and to be but a poor conductor of any other *genre*. The greatest living conductor, Hans Richter, determined to give up composition when he entered on his career as a conductor, and without having a low opinion of his creative talent, we must hold the decision to have been a wise one, for the interpretative faculty would have conflicted with the creative. The conductor of the modern orchestra has a manifold task. First of all comes the technical drill, which is the most wearing of all. The ruling of a band of sensitive musicians is, in itself, not an easy matter. To repress an enthusiastic cellist and cause him to subordinate his phrases to a viola passage which he considers of minor importance, or to subdue an over-zealous trombonist, is not a trifling thing to do. But before even this is done the conductor's work has begun, and he has carefully studied the score that he may have a clear idea of what he intends to do. The discipline of an orchestra should be as rigid as that of a military company. The ideal conductor must not only feel the emotion of a work, but he must be able to express it to his men, by words at rehearsal, by gesture at the concert. The beating of the time is very important, as an indecisive beat will cause the attacks to be irregular. Many composers sin in this respect and cannot conduct their own works with nearly as good results as are achieved by the trained conductor. The signaling of the different entrances of the instruments is another task of the conductor; if the kettle-drums have had fifty-seven measures rest, they should count them, and know exactly when they are to resume playing, but, as a matter of fact, they often rest with calm tranquillity on the shoulders of the conductor, and rely on him to give them the signal to play the first note of their phrase. These are a few of the chief duties of a modern orchestral conductor; to those who imagine that to shake a stick rhythmically over an orchestra is to lead it, they may seem exaggerated, but they are rather under than over-stated. See Schroeder's "Handbook of Conducting," Wagner's "On Conducting."

Corner (Fr.) (kŏr-nā.) To sound a horn, or cornet.

Cornet. The name of an organ-stop consisting of several ranks of pipes. Also, a small horn, of the nature of a trumpet, used in brass bands. The cornet, in the time of Shakespeare, was a rough-toned instrument, like the old serpent, but smaller. The cornet, with keys, is an invention of the early part of the nineteenth century. The cornets most used in military bands are in B flat, and sound a whole tone deeper than written. These are best in flat keys, but, by the addition of an extra crook, which can be thrown open at will, the pitch is lowered a semi-tone and the instrument plays easily in the sharp keys. There is also a smaller cornet in E flat, which sounds a minor third higher than written, and has a very bright and incisive tone. The cornet in C (non-transposing) is little used. The full name of this instrument is *Cornet a pistons*, and it is always supplied with keys which make the instrument capable of producing the chromatic scale. Without touching these keys the cornet can produce the following tones, which are the harmonic series of this fundamental

See *Harmonics.* Some soloists can produce the fundamental and lower it chromatically by means of the keys, this set of tones being called the "pedal tones." There are also skilful performers who can play higher tones than we have given in the above series. The ordinary compass used in modern works would be about

sounding one tone deeper upon the B-flat cornet. See Prout's "Orchestra," or A. Elson's "Orchestral Instruments."

English fingering. In pianoforte music the use of a sign (×) to designate the thumb, in distinction from the German fingering, where the thumb is designated as the first finger. In 1571, according to Ammerbach's "Orgel oder Instrument Tablatur," the fingers were marked "0, 1, 2, 3, 4," in Germany, and this continued for more than a century. At that period England often marked the fingers, "1, 2, 3, 4, 5," so that the German fingering really began in England, and the English fingering" in Germany. Finger-board. That part of a stringed instrument on which the fingers press; the key-board or manual of a pianoforte, organ, etc.

Fingered. A term applied to piano music, signifying that figures or other characters are applied to the notes to show the method of fingering.

Fingering. The method of applying the fingers to the keys, strings, or holes, of different instruments. The figures which are written in music to show the performer which finger to use in sounding a note. The art of fingering is comparatively modern in music. The system of marking numerals to guide the player began with violin music. As the violinist does not use the thumb, this system (the oldest of all) numbered the fingers, 1, 2, 3, 4. When this was transferred to the piano key-board (or harpsichord, clavichord, and spinet), the same figures were used, as the thumb was very rarely upon the key-board in the seventeenth century. The thumb was sometimes used in left-hand passages before it was allowed in right-hand work. When the thumb was applied, the figure 0 was used to designate it. Therefore the earliest fingering ran, 0, 1, 2, 3, 4. This was used in Germany as early as 1571. But the "0" was apt sometimes to be mistaken for a whole note, therefore in England it was soon changed to a sign like the following — — afterwards written x. (See *English Fingering*.) In Germany, as early as the time of Bach, the figures were used as they are to-day — 1, 2, 3, 4, 5. There was very little attempt at any system of fingering upon the spinet or harpsichord, for those instruments gave a continual staccato and could not shade. Therefore, almost any fingers were used, at the will of the performer. We copy the following from a volume of fingered pieces published in England one hundred and fifty years ago:

Probably the earliest practical system of fingering came in with the works of

J. S. Bach. He introduced the thumb freely, and used the fingers in a much more modern style than his predecessors. He did not, however, publish any system of fingering, but contented himself with teaching the system to his sons and other pupils. In Philipp Em. Bach's "Versuch uber die wahre Art das Klavier zu Spielen" (1753), this system was first published. Nevertheless, there was published, in England, a work on the same subject, which antedates Bach's book. This is entitled "Pasquali's Art of Fingering, for the Harpsichord." In this (which has the numeration 0, 1, 2, 3, 4), the thumb is as freely used as in modern music. The Italian masters undoubtedly aided the advance in fingering, some of them before the time of Philipp Em. Bach. It will be seen from the above that the so-called "American fingering" began in Germany, took root in England, and was probably the earliest numeration of the fingers. See *English Fingering*. Also consult Naylor's "An Elizabethan Virginal Book."

Fingering, American. The use of the sign (x) to indicate the thumb in pianoforte playing, in distinction from the German or foreign fingering, in which the thumb is called the first finger.

Fingering, foreign. } A method of fin-
Fingering, German. } gering piano music which designates the thumb as the first finger.

Fingering, scale. The system of scale fingering at present in use is found in the works of Philipp Em. Bach. Yet the principle of it is to be found in some earlier Italian works. In the old spinet and harpsichord works, and in an old organ-book of 1571, the scale was fingered (German fingering) as follows, 2, 3, 2, 3, 2, 3, 2, 3—and in some later methods —2, 3, 4, 2, 3, 4, 2, 3. The earliest valuable system of scale fingering gave the rule to pass the thumb under on the first white key after a black one, which is the basis of our scale fingering to-day. This would present such fingerings as follows (Pasquali's "Art of Fingering"):

But in the right hand, the fingering very nearly followed our present system. In modern scale fingering a few recent theories may be mentioned. A few German pedagogues have endeavored to change the accustomed fingering so that the thumbs shall always fall together, in both hands. This has not as yet been accepted as an advantageous change. As an advanced study, in difficult fingering many great teachers, Rosenthal among others, apply the fingering of the C scale to many other scales. To play the scale of D flat with the C scale fingering is a task of some difficulty. Some teachers are in favor of ending each scale exercise with a slow trill on the last two notes. This counteracts the chief defect of scale practice. In scale work the fingers 1, 2, and 3, have the most work allotted to them; the fourth finger is less used, and the fifth least of all. See Stainer & Barrett, and Grove's Dictionary.

In very old English music it was a kind of drone accompaniment to a song which was sustained by another singer. 2. That part of an organ-pipe below the mouth. 3. The unit of measure in organ-pipes. An open-pipe 8-foot long sounds, and if a series of organ-pipes begin with this tone given by such a pipe, we call the series "8-foot tone." Any stop sounding its actual pitch (as a piano-key would do), is called "8-foot." If sounding an octave higher, "4-foot," two octaves higher, "2-foot," an octave lower "16-foot," etc. The sound-waves of being eight feet long, of the octave lower sixteen feet, the octave higher four feet, etc. See Pole's "Philosophy of Music," and Zahm's "Sound and Music."

Fork, tuning. A small steel instrument with two tines and a handle, used for ascertaining the pitch of any given tone. Tuning-forks were invented by John Shore, a sergeant trumpeter in the English army, in 1711. The early forks were always dated, which helps us greatly in ascertaining the ancient pitches. Tuning-forks generally sound a or a^3, for orchestral purposes and c or c^4 for tuning pianos and organs. Inventions have been made by which the pitch of the tuning-fork can be changed to any note.

Forlane (Fr.) (fŏr-*län.*)
} A lively Venetian dance in $\frac{6}{8}$ time, used by the gondoliers. It is introduced in Ponchielli's "La Gioconda."

Form. Although modern music has become very vague in its shapes and frequently eludes analysis, yet there is in most music a definite architecture that can be studied as readily as the shape of a building. "Architecture is frozen music," and the converse of this proposition is also true, for every classical work and almost every bit of folk-song has a clear and recognizable shape. Musical form generally possesses two elements — contrast and symmetry. In a simple period there are two divisions in contrast and balance, See *Antecedent* and *Consequent.* This in itself makes a complete shape, as follows:

Starting from this as a unit, we can build a larger form by balancing two such periods against each other, ending the first in any key, but returning to the tonic key at the end of the second period. "Annie Laurie" is an example of the form of two periods. Another principle now comes into play, as the forms grow larger. This is *to end as we began*, thus bringing symmetry more strongly to the foreground. This can be attained even in the form of two periods by causing the consequent of the second period to repeat (with alterations) the antecedent phrase of the first period. "The Blue Bells of Scotland," "The Last Rose of Summer," "Auld Lang Syne," "Drink to Me Only with thine Eyes," "The Old Folks at Home," and a host of folk-songs are built upon this model. The principle of ending as we began is carried still further in the form of three divisions in which the entire first period returns.

In this form of three divisions the second division may be a symmetrical period, a countertheme, or it may be a free interlude without a cadence (as above) — an episode. In the return of the first period (the third division), the antecedent is usually presented exact, or nearly so, but the consequent may be freely altered and even a new consequent may appear. Without dwelling upon the variants of this three-division form which is very freely used in drawing-room music (see Mendelssohn's "Songs without Words" for many examples) we pass to a still larger form of three divisions. The forms above described are generally called "Song-forms." By placing two of these complete song-forms in contrast with each other, in a single composition, we obtain a larger form which we call "Minuet-form" or "Song-form with Trio." The shape of this is as follows: Part I. A complete song-form of two or three divisions. Part II. Another complete song-form of from one to three divisions. This is called the *Trio*, from the fact that in the eighteenth century the contrasting piece was generally in three-part harmony. It is most frequently in the

subdominant key. Part III. A return of Part I, either complete or its first period only. If the abbreviated form is used the trio should be larger than a single period. See Chopin's "Polonaise in A," for full form. Another form, a simple "second rondo," although sometimes called a "five-part song-form," is made as follows: Div. 1. A period. Div. 2. Another period, in contrast. Div. 3. The first period again. Div. 4. A second contrasted period, different from Div. 2. Div. 5. A return of the first period, once more. Schumann made a still larger form from this by having each of the above divisions complete song-forms, thus making a song-form with two trios. Larger forms still were evolved from the cycle-forms (which see) of the seventeenth and eighteenth centuries. In these, the Suite, Partita, etc., several different movements were placed in contrast with each other. See *Suite, Sonata, Symphony.* Consult Parry's "The Evolution of the Art of Music," Goetschius' "Lessons in Music Form," and Elson's "Theory of Music," for fuller details.

Fugitive pieces. Ephemeral, compositions.

Fugue (fūg.) A term derived from the Latin word *fuga*, a flight. It is a composition in the strict style, in which a subject is proposed by one part and answered by other parts, according to certain rules. The old canons were called *fugues*. Fugues can be classified as follows: 1. According to the number of voices appearing, as "a two-voiced fugue," "a three-voiced fugue," etc. 2. According to the number of subjects; a fugue with one subject is a "single fugue," one with two subjects is a "double fugue," etc. 3. According to the exactness of the answer; an answer that exactly imitates the subject on the degree of the dominant, constitutes a "real fugue," while an answer which has some alterations from the subject, in order to keep it in the "tone" or key of the composition, constitutes a tonal fugue. 4. According to the modulations and scale-form of the composition; a fugue which keeps within the diatonic progressions is called a "diatonic fugue," while one which has chromatic progressions in its subject and answer is a "chromatic fugue." There are also fugues written in the old Greek scales (similar to the Gregorian tones) and these are called by the names of these scales as a "doric fugue," etc. 5. According to the style of the answer, which may be inverted or augmented, producing an inverted or augmented fugue. Finally, a fugue may be strict or free, according to the style of its treatment. Fugues differ very greatly in their construction, but in one point they are all alike; every fugue is a contrapuntal development of the subject which is announced quite alone at the beginning. Most fugues use more than this material; they develop the entire *exposition*. This exposition is made up of: 1st. The subject, which is a figure or phrase, *not* a complete melody. 2d. The answer, which is the subject reproduced on the degree of the dominant, either above or below. 3d. The counter-subject, which is a contrasted phrase, accompanying the subject or the answer, from the entrance of the second voice. One shape of four-voiced expositions in a strict fugue may be presented as follows:

Soprano	——	——	——	Answer.
Alto	——	——	Subject	Counter-subject.
Tenor	——	Answer	Counter-subject	Free part.
Bass	Subject	Counter-subject	Free part	Free part.

But there are many more free than the above. The moment that the exposition is ended (there is no pause) the voices go on to treatment of the matter presented. Every device of counterpoint is used, so that the fugue becomes the most intellectual composition in music. Episodes may occur, in which we find interesting derivations from figures of the first part; *strettos* may be found in which the subject and answer overlap each other, as in a *canon*. The normal fugue is made of an alternation of *strettos* (strict) and *episodes* (free). In Bach's "Well-tempered Clavichord," Vol. II, No. 9, there is an example of this. No. 5, in the same volume, is another. Sometimes the fugue does not attempt stretto work at all, but is made (a free fugue) of episodes. See No. 12 of the same volume. Sometimes a fugue can be made wholly of strettos without episodes, as in the same work, Vol. I, No. 1. Sometimes the strettos become absolute canons, as in Vol. II, No. 7 (Mozart's favorite fugue): but whichever mode of treatment is followed, the body of the fugue is logically derived from the exposition, there are no full cadences, no complete melodies, and no repetitions of any divisions. An organ-point is given in some fugues near the end, and the last division is an episode which is called *The Coda*. In some fugues the counter-subject is regularly worked up with the subject and answer. See *Well-tempered Clavichord*, Vol. II,

No. 9, for example of this. In others, there is no regular recurring counter-subject. See VOL. II, No. 7, for this. Some fugues are chiefly developed by double or triple counterpoint (see VOL. I, Nos. 2, 3, and 10, for this), not relying upon strettos in any degree. A stretto driven through all the voices at regular time-distance and intervals, forming a short canon, is called a *Stretto Maestrale*, or *Masterly Stretto*. See VOL. II, No. 5, in the final stretto, for an example of this. The double fugue is two fugues going on at the same time; that is, it presents two subjects and two answers, worked up simultaneously. For examples of this, see the "Kyrie Eleison" of Mozart's Requiem or the finale of the second part of Haydn's "Creation." For further details regarding fugues see Prout's "Fugue" and "Fugal Analysis," Higg's "Primer of Fugue," and Boekelman's colored edition of "Bach's Fugues."

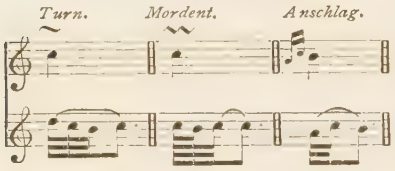
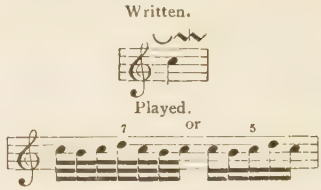
Grace. } Ornamental notes and em-
Grace-note. } bellishments, either written by the composer, or introduced by the performer. The principal embellishments are the *appoggiatúre*, the *turn* and the *shake*. Any note added to a composition as an embellishment. Embellishments of every kind were most copious in harpsichord, spinet, and clavichord music, as well as in violin music, in the eighteenth century. In the first-named instruments their presence was often necessary, since they served to prolong a note (by trill, turn, or mordent) which these instruments could not sustain. But what began in necessity soon became a perverted taste. Marchand, in Paris, used to boast that he could add an embellishment to every note of a composition. Bach followed Marchand's plan of ornamentation in his suites and inventions. The matter of embellishments has been a very misty one from the beginning. In studying the eighteenth century rules one finds numerous inconsistencies. Ph. Em. Bach contradicts Leopold Mozart, and Brossard and Grassineau, in their dictionaries, differ from Callcott. It is not in the province of a dictionary to enter into the polemics of this subject. The reader can find a small encyclopedia of this matter in Dannreuther's "Musical Ornamentation" (2 vols.). Many of the signs are becoming obsolete, and it has become the custom to write the notation in full, in modern editions, avoiding the signs altogether. The chief signs of embellishments used at present are the *Trill, Turn, Mordent, Appoggiatura and Acciaccatura*, which will be found defined under their respective names. A brief synopsis of graces may be thus presented:



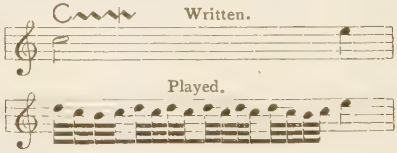
Other signs with varying nomenclature are found in Bach and his contemporaries, as follows:

When the tempo is rapid, and there is difficulty in executing the figure in full, it can be played in five notes. Example:

The inversion of this figure is signified by this sign, . Example:



There are alsó combinations of turns and trill, represented by single signs. This sign, signifies a trill beginning and ending with a turn:



while the following, signifies a trill beginning with an inverted turn, and ending with a simple turn. Example:

If, however, either of these signs occur over a short note, where there would not be time to trill, the two turns alone can be played. Example:

Although many more signs of embellishment and grace-notes might be added to the above, these (with the turn, trill, etc.) are all that will be found in practical use to-day, and even these are rapidly disappearing from modern notation, being written out in full when required

It is supposed to be of Spanish invention and is very popular in that country. The guitar is not admitted to the orchestral ranks, although Schumann at first thought of employing it as accompaniment to the "Romanza" of his D minor symphony; but finding it too light toned, he substituted violins, *pizzicato*, for it. This same substitution is made in a few other cases where composers have used guitar or similar instruments, as, for example, the serenade of Almaviva in Rossini's "Barber of Seville," or the serenade of Don Giovanni in Mozart's opera. In the latter case the composer used the mandoline. The guitar is generally tuned:

Harmonics. 1. An epithet applied to those concomitant, accessory sounds accompanying a principal, and apparently simple tone. See *Acoustics.* 2. *Harmonics* is also the name given to certain tones produced on the violin, harp, and other stringed instruments, tones which have another name — *flageolet tones* — owing to

their peculiar character. By touching a vibrating string very lightly in the middle, or at a point a third, fourth, fifth, etc., of its length distant from one of its ends, it is made to vibrate in two, three, four, five, etc., divisions, and the results are notes respectively an octave, twelfth, fifteenth, seventeenth, nineteenth, etc., higher than the tone obtained from the open string. 3. The harmonics can be sounded one by one on any tube or wind-instrument under certain conditions. They are produced from the column of air by subdivision, exactly as with the string described above. Thus, a tube 8 feet in length, will sound but by forcing the column of air to divide into regular segments we can obtain the over-tones, or harmonics. The first will be produced by one-half the length of the column, and will be the octave, the second by one-third, and will be the fifth above that tone, and the column can be subdivided into fourths, fifths, sixths, etc. The series will be as follows:

Fundamental.

And a similar series of tones will be produced from any other fundamental, *i. e.*, the octave, twelfth, fifteenth, etc. All of these over-tones are also sounding simultaneously with the fundamental tone. But these are not all exactly notated, nor can they be, in our musical system. The intervals grow closer and closer, as the column is more and more subdivided. The notes marked "x" in the above series are not exactly represented in the table. On the brass instruments, such as horns, cornets, trumpets, trombones, etc., the larger part of such a series as the above is sounded in playing.

Harmonic triad. The common chord, consisting of a fundamental note, its third and fifth.

Harp. A stringed instrument of very ancient origin, consisting of a triangular frame, having strings extended in parallel sections from the upper part to one of its sides, and played with the fingers. It had its origin in the bow of most ancient races. It was a highly developed instrument in ancient Egypt. But, in all its ancient forms, it was a diatonic instrument and could only modulate by pausing to retune the strings. Such was the instrument of the Cymric and Celtic bards. In 1758, an improvement was made by M. Simon, which altered the pitch of the strings, by wheels, with pins attached, worked by pedals. From this time the composers began to use the harp, and Mozart, Gluck, and others, employed it in their scores. But it was still far from being a thoroughly modulatory instrument. The perfection of the harp did not occur until 1810, when Sebastian Erard introduced a system of double-acting pedals by which any note could be raised either a semi-tone or a whole tone, at will. As the pedals could only raise, not lower, the pitch of any note, in order that the natural and sharp degrees of a tone could be gained in every case, and in a similar manner, it was necessary that each open wire should represent a flat note in the first place. This is done in tuning the modern harp (called the *double-action* or *concert-harp*) and as there is but one key in which the notes are all flat, the harp is tuned in that key, C ♭. The harp has very nearly the compass of the piano, starting with the lowest C ♭ of that instrument, and ending with its highest F ♯. It is notated as the piano, on two staves, one treble and one bass. Its strings are of catgut in the upper octaves, of catgut wired, or of heavy wire, in the lower. The C-strings are colored red, the F-strings blue, that the performer may readily see the position of any note. The harp sounds best in flat keys. It has usually forty-six strings. An attempt has recently been made in France to do away with the pedals, and string the harp chromatically. See Flood's "Harp."

In shape it resembled the grand pianoforte and had sometimes two rows of keys, but it was very inferior to that instrument in capacity for power and expression; the various shades of loud or soft could only be obtained by changing from one set of keys to another, or by moving certain stops as in the organ. Its wires were not struck by hammers, but plucked by quills. See *Piano.* The compass was about four octaves, but sometimes more.

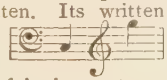
Horn, alpine. An instrument made of wood, and used to convey sounds to a great distance.

Horn, basset. An instrument resembling the clarinet, but of greater compass, embracing nearly four octaves. A species of clarinet a fifth lower than the C clarinet. Like the English horn it stands in F, that is, it sounds a perfect fifth lower than written. Its written compass is about

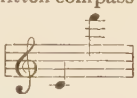


It has a very mournful, gloomy tone-color, which suits it well to funereal music. It plays easiest in flat keys. It was prominently used by Mozart in his great *Requiem*, and in other works.

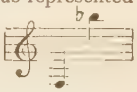
Horn, bugle. A trumpet with keys.

Horn, chromatic. The French horn.

Horn, English. A species of oboe, a fifth lower than the ordinary oboe. It is more melancholy and also more masculine than the oboe. It has been freely used by Wagner, Berlioz, Rossini, and Schumann, to represent a shepherd's pipe. The English horn, as it sounds a fifth below the written notes, is said to stand in F, as the scale of C, written, will actually sound the scale of F. If, for example, we desired to employ the English horn in a composition in the key of E flat, we should be obliged to write it in the key of B flat, a fifth above, to attain the required sounds. The written compass of the English horn is



but the actual sounds thus represented are



(Ger., *Das Englische Horn;* Fr., *Cor Anglais;* It., *Corno Inglese.*) It probably had its origin in England from a shepherd's pipe.

Horn, French. An orchestral instrument of brass or silver, consisting of a long tube, twisted into several circular folds, and gradually increasing in diameter from the mouth-piece to the end. This instrument is most frequently called simply *the horn*. There are horns in all the different keys, but it is not necessary to make a special instrument in each key, for, by the addition of sections of tubing, called *crooks*, the horn (as also the trumpet and cornet) can be lengthened and set in another key than its natural one. The horn generally used in the orchestra is the one in F, which, in its natural state, without any added crooks, would sound a perfect fifth lower than its notation. The highest horn made is that in C-alto, which is non-transposing, sounding as written. By drawing out the mouth-piece the horn can be lowered a semi-tone in pitch, the C-alto horn thus becoming B-alto. All the horns but the C-alto transpose downwards. In an orchestral score the horns are generally notated in the key of C, and the B-alto sounds a semi-tone deeper than notated, the B-flat alto one tone, the A-horn a minor third, the A-flat horn a major third, etc, the deepest being the *B-flat basse* which sounds a ninth deeper than written. The horns from the C-alto down to the G-flat horn give the harmonic series (see *Harmonics*) of tones from the fundamental note to about the ninth harmonic

 , without touching the keys. The keys by constantly lengthening the tube (see *Ventil*), add lower series to the natural tones, so that a chromatic scale can be played on the instrument. The horns from that in F, to that in B-flat basso, lose the fundamental tone of the series, but give the entire harmonic series of tones up to the fifteenth harmonic, although the tenth overtone is difficult to produce. The tone of the horn is modified by the player's right hand, which is placed in the bell of the instrument. When the hand is pressed very firmly in the tube, as if to prevent the escape of any air, a "stopped" tone is the result, and the pitch is lowered a semitone. The quality of the horn is mellow and tender, its tone-color suiting it to romantic effects, and woodland and forest pictures, but the stopped tones are the reverse of this, and are the most repulsive tone-color that can be produced in the orchestra.

In the old Suite, the *Intermezzi* were from two to four short movements, of moderate tempo (generally minuets or gavots), placed between the sarabande and the finale,—the *gigue*.

Interval (Lat., *intervallum;* Ger., *Intervall;* Fr., *intervalle;* It., *intervallo.*) The difference in pitch between two tones. The interval is counted from the lowest note to the highest. Thus in the scale of C major the intervals would be named as follows:

In the inversion of these, the prime becomes an octave, the second a seventh, the third a sixth, etc. But the character of the interval may change in the inversion. The intervals are thus classified:

It will be noticed that each *major* or *perfect* interval, when widened by a semi-tone, becomes *augmented;* that each *major* interval, contracted by a semi-tone, becomes *minor;* and that each *minor* or *perfect* interval contracted by a semi-tone, becomes *diminished;* and that in the inversion

a Perfect	interval remains	perfect,
a Major	" becomes	minor,
a Minor	" "	major,
an Augumented	" "	diminished,
a Diminished	" "	augmented.

Thus, if we invert the three sevenths above given they become seconds, but of the following kinds:

Interval, augmented. An interval which is a semi-tone, or half-step, greater than a major or perfect interval.

Interval, consecutive. An interval passing in the same direction in two parallel parts.

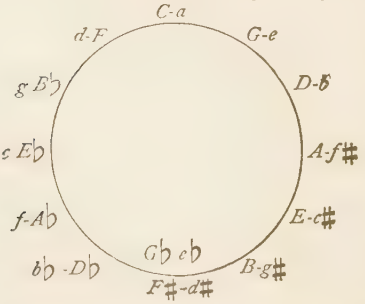
The relationship of these keys can best be illustrated by the following diagram, which is called the *Circle of the keys:*



Keyboard. (Ger., *Klaviatur*, Fr., *Clavier*, It., *Tastatura.*) The rows of keys upon a pianoforte, organ, or similar instrument. The keyboard as at present arranged for piano, or organ, is very ancient. The principle of the present keyboard existed on the Halberstadt organ in the fourteenth century. The earliest known record of the clavichord occurs in some rules of the minnesingers, dated 1404, preserved at Vienna. The monochord is named with it, showing a differentiation of these instruments, and of them from the clavicymbalum, the keyed cymbal, cembalo (Italian), or psaltery. From this we learn that a keyboard had been thus early adapted to that favorite mediæval stringed instrument, the *cembalo* of Boccaccio, the *sautrie* of Chaucer. The oldest actually existing keyboard of the present style is on a spinet in the Paris *Conservatoire*, which is dated 1523. It is probable that the shape of the piano keyboard has not materially changed in the last five hundred years.

This idea is found in Mozart's "Don Giovanni," composed more than a century ago, but it is used by Wagner so prominently and so constantly that it assumes a new significance, causing the orchestra to speak an intelligible language. The *leitmotif* must be characteristic of the person or thing it is intended to represent, and must always remain very clearly recognizable. It is, therefore, not so freely developed as the ordinary musical figure. It is most frequently treated by transposition, with constant changes of harmony and modulation.

The *lute* consists of four parts, viz., the table; the body which has nine or ten sides and is pear-shaped; the neck which has as many stops, or divisions; and the head or cross, in which the screws for tuning it are inserted. In playing this instrument, the performer strikes the strings with the fingers of the right hand, and regulates the sounds with those of the left. The strings, attached to a bridge fixed on the face of the instrument, and passing over or beside the fretted finger-board, were plucked by the fingers, and varied in number from six to thirteen, the highest or melody-string being single, and the others in pairs of unisons. Bass strings *off* the finger-board, similar to the bass strings of a zither, each yielding but one tone, were generally attached to a second neck. These bass strings were introduced in the sixteenth century, and led

to divers modifications in the build of the instrument; the various forms of large double-necked lutes then evolved (*theorbo*, *archiliuto*, *chitarrone*) being general favorites. The lute came from the Orient, and its name is derived from an Arabic word *Elood* or *L'Eudo*, meaning *The Wood*.

Metronome (Gr.) (*mĕt*-rō-*nō*-mĕ.) } A machine invented by John Maelzel (in 1815), for measuring the time or duration of notes by means of a graduated scale and pendulum, which may be shortened or lengthened at pleasure. It is a pendulum with a movable counterweight which can be set at any designated figure and which will then swing to and fro that number of times per minute, an audible click accompanying each oscillation. When made with a bell, the sound of this appliance denotes the beginning of each measure. The words of *tempo* on the metronome, such as *Andante, Largo*, etc., are entirely misleading; the teacher must be guided by the numerals only. Beethoven and Czerny were the first composers to use the metronome.

Metronome, bell. A metronome with the addition of a small bell, which strikes at the commencement of each bar.

Metronomic marks. Figures appended to pieces of music, referring to corresponding figures on a metronome: The "M. M." employed in this connection means "Maelzel's Metronome," *not* "Metronome Mark." The following are examples of metronome marks: 1. M. M. ♩ = 112. 2. M. M. 𝅗𝅥. = 60. These would mean: 1. That the counterweight of the metronome is to be set at 112, and that each click is to represent the speed of a quarter-note, or in other words, that the speed is to be at the rate of 112 quarter-notes a minute. 2. This signifies that the metronome is to be set at sixty, and each click is to represent a dotted quarter.

Military music. Music intended for military bands, marches, quicksteps, etc. Baker's Dictionary gives the composition of the New York Twenty-second Regiment band as

2 piccolos	1 contrafagotto
2 flutes	1 E♭ cornetto
2 oboes	2 1st B♭ cornets
1 A ♭ piccolo clarinet	2 2nd " "
3 E♭ clarinets	2 trumpets
8 1st B♭ clarinets	2 flügelhorns
4 2nd " "	4 French horns
4 3rd " "	2 E♭ alto horns
1 alto "	2 B♭ tenor horns
1 bass "	2 euphoniums
1 sopr. saxophone	3 trombones
1 alto "	5 bombardons
1 tenor "	3 drums
1 bass "	1 pair cymbals
2 bassoons	

The military band is composed, therefore, of the orchestral wind-instruments plus saxophones, cornets, and drums. The oboe is often omitted. The clarinets are made very prominent, taking the place of the strings. There are instruments of high pitch used, such as the E flat clarinet, the A flat clarinet, the tierce flute, and others, that would be too shrill for orchestral use. A military band has sometimes as many performers as a full orchestra.

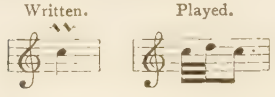
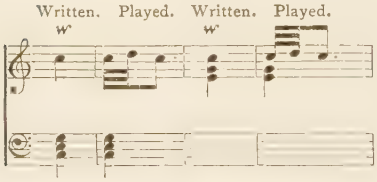
Mordént (It.) (mŏr-*dānt*.) Transient shake or beat; an embellishment formed by two or more notes, preceding the principal note. An embellishment consisting of the note over which the sign is placed and the note below it: thus

There is, unfortunately, considerable confusion in the nomenclature of the mordent. Some apply the word to an embellishment with the *upper* note as auxiliary, while others call this the *inverted* mordent, and others again the *Praller*, or *Prall-trill*. The most-used system of nomenclature is as follows:

Praller or Inverted Mordent.

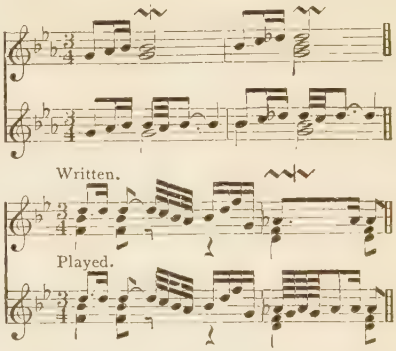


If there should be any accompanying note to that over which the praller is written, it is to be struck simultaneously with the first note of the praller.



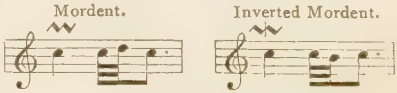
The accent is sometimes upon the first note of the group, and sometimes upon the last or principal note. The Germans sometimes distinguish these two kinds by different names, calling the first *Praller*, the second *Schneller*. Mordents, or prallers, over short notes, and in rapid passages, are generally accented upon the first note of the group.

The rule regarding chord-playing (given above) is also applied to the mordent and double mordente.



The word *mordent* is derived from the French verb *mordre* (to bite) and the mordent is really a fragment bitten out of a trill. The sign itself shows this, for in ancient days the trill was written thus ~~~~~, while the mordent, written thus ∿∿, represents a single beat of it.

The intervals of the praller, unless altered by accidentals, are according to the scale, that is, a praller on the third or seventh degree would have a semi-tone interval, and all others would have whole tones, unless accidentals were combined with the sign. The interval of the mordent ∿ is generally a semi-tone. The great haziness of nomenclature in this subject, the fact that the mordent is very rarely met with in modern music, and the additional fact that the vertical line drawn through any sign is usually an indication of *inversion*, leads one to hope that the following simple nomenclature may yet be adopted by teachers:



or that the former may be called an "upward mordent" and the latter a "downward mordent."

Notation. The art of representing tones by written or printed characters. The earliest fixed system was that of the Greeks (600 B. C.), which used the letters of the alphabet, both complete and fragmentary, to indicate different pitches and intervals. This system, with various changes, existed well into the middle ages. In the earliest part of the dark ages another system existed contemporaneously with the employment of letters — the *neume* notation. In the *neumes*, we find the beginnings of an effort to appeal to the eye as well as to the thought. The chief elements of this mode of notation were the vertical line | (called *virga*), the dot . , and the horizontal line — (called *jacens*); and after these, came the upward loop ⌣, called (*plica ascendens*), and the downward loop ⌢ (called *plica descendens*), besides a host of other similar characters. These marks were placed directly over each syllable; and while they could not give the exact pitch to the singer, they served very well to show the direction in which the voice should go, and also indicated roughly the length of the note. They were, in short, merely a reminder to the singer of the progressions of a melody which he had learned orally; a species of musical mnemonics. The letters now underwent a modification. A major scale, corresponding to the diatonic scale, which we begin on C, was represented by the letters *A B C D E F G A*. This was afterwards changed to represent a minor scale, in an effort to bring it more in consonance with the old Greek theory. Odo, of Cluny, is credited with making this reform during the tenth century — our present letter system! The next improvement was an endeavor to give actual and definite pitch to the neumes, by drawing a red line across the manuscript. This line which, represented F, was the very beginning of modern staff notation. Another line, this time of yellow color, was soon added above the red one; and this later line was to represent C. Soon, the colors of the two lines were omitted, and the letters *F* and *C* were placed at the beginning of each of them. From this arose our F and C clefs, which preceded the G clef by some centuries. Hucbald, a monk of St. Amand, in Flanders, is said to have

been the inventor of the foundation of modern notation, the line system. He died about 932. Without digressing to a description of the many experiments which followed, we can state that the next important step forward was the establishment of the vocal syllable system (see *Aretinian Syllables*), by Guido, of Arezzo. In addition to this great invention (which was practically the beginning of reading at sight), Guido threw his power against the vagueness of the *neumæ*, and worked with might and main for the line (or staff) system. Taking the yellow, *c* line, and red, *f* line, he drew a black line between, to represent *a*. The staff was now represented thus:

c ——————————— Yellow.
a ——————————— Black.
f ——————————— Red.

And, most important improvement of all, Guido used the spaces to represent notes as well. It was practically the beginning of the modern staff. Besides this, there is evidence that Guido did not always confine himself to the three lines, but sometimes added a line above the yellow one to represent *e*, or below the red one to represent *d*. Guido's notes were still borrowed from the neumes, but he altered their shape somewhat, so that, even in these, we perceive the predecessors of modern notes. The next forward movement was in the establishment of notes of *definite length*. The honor of this improvement is claimed by Walter Odington, an Englishman, and Franco, of Cologne, probably a Netherlander. Both of these monks existed in the thirteenth century. Franco seems not to have invented much, but to have practically applied the invention of others. In the *Ars Cantus Mensurabilis* of this writer (the first practical treatise on notes of definite length), we come upon the true system of modern notation, although in a crude state. He presents to us these notes:

Large. Longa. Brevis. Semibrevis.

The semibrevis was the shortest note in Franco's system. Rests began at this time also, and were not vastly different from the longest rests of the present time. Early in the fifteenth century the above notes were written open (in outline) somewhat as at present. The change to the round shape, from the diamond and square, came about in the seventeenth century, for greater ease in manuscript work. Meanwhile, the accidental marks had come into existence. See *Sharp, Flat, Natural, Accidentals*. The time-signs, or rhythm-marks, of this epoch, before the invention of the bar and the division of music into measures, were fearfully complicated and vague. It is beyond the province of this book to explain this obsolete system. Only one vestige of it is left in modern music. The sign 𝔠 comes to us from the middle ages when the triple pulsation of music was held to be the only perfect rhythm, as the monks held that it represented the *Trinity*. It was written with the following sign ○, and was called *Perfectum:* when the monks admitted an even rhythm, they called it *Imperfectum* and broke the circle in writing the sign thus: 𝔠, which we still use to represent $\frac{4}{4}$ rhythm. With the beginning of opera (about 1600) the signs of tempo and expression begin to appear, and music was *divided into measures!* Peri (in 1600) is said to have been the first practically to use the bar line in the modern style.

Grouping of notes together, a great aid in the representation of rhythm, was not adopted until near the beginning of the eighteenth century. Until that time, a passage like the following

would have been written thus:

The gradual introduction of changes in the system of notation, and the addition of various signs can be traced by consulting the following, rather rare musical dictionaries: Tinctor's "Terminorum Musicæ Diffinitorium" (first printed in 1475), Brossard's "Musical Dictionary" (1702), Grassineau's "Musical Dictionary" (1740), Callcott's "Explanation of Musical Terms, etc." (1792), Zarlino's Theoretical Works

(1562), Playford's "Skill of Musick" (1662), etc. At the beginning of the eighteenth century, the notation of the best printed works in England was not very different from that of the present.

Notes. Ger., *Note* (*no*-teh); Fr., *Note* (*noht*); It. *Nota* (*no*-tah). The notes which are in general use to-day to express the duration of tone are as follows:

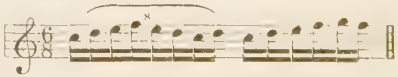
AMERICAN	ENGLISH	GERMAN	FRENCH	ITALIAN
Double note	Breve	Brevis	Brève, or Carrée	Breve
Whole note	Semibreve	Ganzenote	Semi-brève, or Ronde	Semibreve
Half-note	Minim	Halbnote, or halbe note	Blanche	Minima, or Bianca
Quarter-note	Crochet	Viertel, or Viertelnote	Noire	Nera
Eighth-note	Quaver	Achtel, or Achtelnote	Croche	Croma
Sixteenth-note	Semiquaver	Sechzehntel, or Sehzechntel note	Double-croche	Semicroma
Thirty-second-note	Demisemiquaver	Zweiund-dreissigstel (note)	Triple-croche	Semibiscroma
Sixty-fourth-note	Hemidemisemiquaver, or Semidemisemiquaver	Vierundsechzigstel (note)	Quadruple-croche	Quattricroma

Occasionally, in old editions of Palestrina or Di Lasso, one may find the *longa* ⊐, equalling four whole notes. In Beethoven's "Sonata Pathetique" (introduction), and in many other works, one hundred and twenty-eighth notes are to be found, and there are very rare instances of the use of even two hundred and fifty-sixth notes , but these are generally altered into cadenza notation (small notes) in recent editions. *Artificial grouping* of notes can produce notes of *any* length, such, for example, as three, five, six, seven, nine, etc., to a whole note. These are produced by grouping several notes together (by flags, or slurs, or both) and adding a numeral. The following rules are observed in such groupings: 1. Never add a numeral to a group which is to consist of normal notes. The numeral always gives the notes an abnormal value. 2. Any artificial group which is divided in half by the rhythm or the accompaniment, is incorrectly numbered. Thus:

the sextolet is incorrect, and should be written as two triplets. 3. The artificial group generally occupies a regular rhythmic division of the music; a single beat, a half measure, etc. The mode of writing such groups can be thus stated: In compound rhythm ($\frac{6}{8}$, $\frac{9}{8}$, $\frac{12}{8}$, etc.), and in triple rhythms, two or four artificial notes equal three normal ones of the same denomination

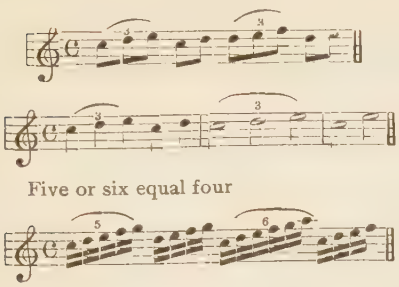
seven equal six

more rarely seven may equal four. Eight equal six



and in these rhythms, five may sometimes equal three. 13, 14, 16, or 17 are frequently written to take the value of 12.

In *all* rhythms three artificial notes equal two normal ones of the same denomination.



Five or six equal four

In even rhythms seven also equal four, and from 9 to 15 equal eight of their own denomination. When small notes are written, the time values are not necessarily adhered to, the group being played with the freedom of a cadenza.

Many errors of notation have been made, even by Mozart and Beethoven, in writing sextolets, groups of six, where double triplets were intended. An artificial group of two notes is called a *doublet*, of three a *triplet*, four a *quattrolet*, five a *quintolet*, six a *sextolet*, etc. The triplet is the artificial group most used, and its three notes have the value of two normal notes of their own denomination. Triplets of two notes can sometimes be used, one of the notes having two-thirds, the other one-third, of the total value.

For further study of origin of notation consult Grove's Dictionary, article "Notation," Elson's "Realm of Music," article, "The Rise of Notation," and Williams' "Story of Notation." See also *Rests*, *Signs*, *Time*, *Rhythm*, *Flat*, etc.

O. This letter, forming a circle or double C, was used by the mediæval monks as the sign of triple time from the idea that the *ternary*, or number *three*, being the most perfect of all numbers, and representing the *Trinity*, would be best expressed by a circle the most perfect of all figures. The imperfect, or common time, was designated by a C, or semi-circle — a broken circle.

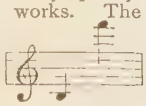
Oboe (Ger.) (*ō*-bō-ĕ.) } A hautboy; also,
Oboé (It.) (*ō*-bō-ā.) } the name of an organ-stop; a double reed-instrument of much antiquity. It was a prominent instrument in the earliest orchestras. The double reed used gives to the tone a number of the higher harmonics with considerable prominence, the tone-color becoming thin, penetrating, and somewhat nasal. The oboe can depict direct pathos, as in the funeral march of the *Heroic* symphony; innocence and simplicity; and above all, rustic gayety, it being the pastoral instrument of the orchestra, and used in this manner in Beethoven's sixth symphony, and numerous other works. The compass of the instrument is about, but the lower notes are somewhat hoarse and the highest ones a trifle forced and screaming in quality, the best effects being attained in the middle register. The nearer we keep to the key of C, the easier and the more natural the oboe part will be. Because of its very characteristic color the oboe should not be too freely used in prominent passages. The orchestra usually receives its pitch from the oboe, that instrument giving "A" at the beginning of each concert or composition. The oboe requires great steadiness of blowing, the player becoming exhausted by *holding in*, not by exhaling, his breath. Consult A. Elson's "Orchestral Instruments," and Prout's "Orchestra."



Oboé da caccia (It.) (*ō*-bō-ā dä *kät*-tshē-ä.) A larger species of *oboe* with the music written in the alto clef. Its place is taken, in the modern orchestra, by the English horn. Bach calls for this oboe and the oboe d'amore in his *Passion music* and his *Christmas oratorio*. The oboe d'amore, which was also called *oboe lungo*, produced a delicate and sweet tone, while the *oboe da caccia* corresponded to the tenoroon oboe, or corno inglese. The latter though not in common use, is occasionally introduced into the scores of modern operas, as in Halévy's "Jewess"; Meyerbeer's "Huguenots," etc.

Oper (Ger.) (*ō*-pĕr.) } A drama set to
Opera (It.) (*ō*-pĕ-rä.) } music, for voices and instruments, and with scenery, decorations, and action. The term is also applied to any *work*, or publication of a composer. (See also *Opus*.) *Opera*, more fully *opera di musica*, was a form of musical composition evolved shortly before 1600, by some enthusiastic Florentine amateurs who sought to bring back the Greek plays to the modern stage. But they achieved much more than this, for they led the way from polyphony to homophony, from counterpoint to monody. The chief parts of the opera, apart from the overture, are the recitative, aria, chorus, and the various kinds of *ensemble* — duet, trio, quartet, quintet, sextet, etc. — of which the *finale* is the most important. The finale is generally of a complex form; duets, trios, etc., are mostly, and choruses sometimes, modelled on the aria form, or, rather, forms. (See *Aria, Recitative*.) In France operas are classified as follows: GRAND OPERA, in which the plot is throughout earnest, and there are no spoken passages. OPÉRA BOUFFE. A comic opera, but one of a much lighter character than an *opéra comique*. OPÉRA COMIQUE. An opera with spoken dialogue, as distinguished from the *grand opera*, which has no spoken dialogue. OPÉRA LYRIQUE. A lyric opera. Thus "Carmen" would be classed as an *Opéra Comique*. In America the term *comic opera* has a much lower application and is applied to the *opéra bouffe*. Consult A. Elson's "Critical History of Opera," and Grove's Dictionary.

Operetta. A little opera, generally in a light and playful vein.

Ophicleide (*ŏf*-ĭ-klīd.) A large bass wind-

instrument of brass, sometimes used in large orchestras, but chiefly in military music. It has a compass of three octaves, and the tone is loud and of deep pitch. This instrument is now obsolete in Germany and America, although still employed in France and England. It has about the compass of the bass-tuba, but has a more rasping and rough tone. Mendelssohn used the ophicleide very successfully in his "Elijah," and in his overture to "Midsummer Night's Dream" comically expresses the snoring of the drunken weaver, Bottom, by means of it. The bass-tuba takes the place of the ophicleide in almost all modern works, but does not reproduce its peculiarly raucous tone.

Ophicleide stop. The most powerful manual reed-stop known, in an organ, of 8 or 4-foot scale, and is usually placed upon a separate sound-board, with a great pressure of wind.

Ophicleidist. A performer on the ophicleide.

Opus (Lat.) (ō-pŭs.) } Work, composition; as, Op. 1, the first work, or publication of a composer. The numeration of musical works by *opus* numbers began in the last part of the eighteenth century. Mozart was the first great composer whose works have an occasional *opus* number, but Beethoven was the first to use this mode of numeration regularly. Properly, the number of an *opus* refers to the order of publication, *not* of composition. An *opus* may include several numbers or may consist of a single piece.

Opus (Ger.) (*ō*-poos.) }

Orage (Fr.) (ō-*razh*.) A *storm;* the name of an organ-stop intended to imitate the noise of a storm.

Oratoire (Fr.) (ŏr-ä-*twär*.) Oratorio.

Oratório (It.) (ŏr-ä-*tō*-rĭ-ō.) }
Oratorium (Lat.) (*ŏr*-ă-*tō*-rĭ-oom.) } Oratorio.
Oratorium (Ger.) (*ōr*-ä-*tō*-rĭ-oom.) }

A species of musical drama consisting of airs, recitatives, trios, choruses, etc. It is founded upon some Scriptural narrative, and performed without the aid of scenery and action. The oratorio received its name from the *oratory* of the church where it was at first performed. It was originally given with costumes and scenery, like an opera. It was founded by St. Philip Neri (d. 1595), and Emilio del Cavaliere whose first great oratorio was performed in 1600. The opera and oratorio went hand in hand for some decades, until Carissimi abolished dramatic action and made oratorio a concert, without operatic adjuncts. The oratorio gradually became the contrapuntal form that called forth the highest efforts of Bach and Handel. Consult Naumann's "History of Music," Ritter's "Students' History of Music," Dickinson's "Music in the History of the Western Church," and Upton's "Standard Oratorios."

Orchestra. That portion of a theatre or concert-room where the musicians play; the term is also applied to the performers themselves, collectively.

Orchester (Ger.) (ōr-*khĕs*-tĕr.) }
Orchéstra (It.) (ōr-*kās*-trä.) } The orchestra.
Orchestre (Fr.) (ŏr-*kĕs*tr.) }

The orchestras of Bach or Handel were small compared with the modern Grand Orchestra. The first composers who had some semblance of the modern orchestra in their works, were Haydn and Mozart. Beethoven was, however, the true founder of the orchestra. The different parts of the orchestra can be classified as follows: The string band, or the *Strings* — first violins (soprano), second violins (alto), violas (tenor), and 'cellos and contra-basses (bass). The harp, which has become a member of most modern orchestras, is not to be classed with the strings, but stands by itself. The wooden wind-instruments, or the *wood-wind*, — flutes, oboes, clarinets, and bassoons, being respectively soprano, alto, tenor, and bass, of the quartette (for four-part writing is the foundation of almost all orchestral work), and an English horn, a piccolo, a contra-bassoon, and a bass-clarinet, are admitted to the ranks of this division. In the brass band we find the French horns, trumpets (generally replaced in American orchestras by cornets — a poor substitution), tubas, and trombones. The percussion is counted with the brasses, and consists of kettledrums, and occa-

sionally bass drum, side-drum, cymbals, triangle, gong, and other less important instruments. In the large modern works, by Wagner, the orchestra has numbered 116 men; and other composers, such as Richard Strauss, who may be called the chief orchestral colorist of the present, use instruments not numerated, in the above list. Consult Prout's "The Orchestra," or A. Elson's "Orchestral Instruments and their Use."

Orchestration. The performance of an orchestra; the arranging of music for an orchestra; scoring; instrumentation.

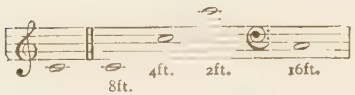
Orchestrina (ŏr-kĕs-*trē*-nä.) } An instru-
Orchestrion. (ŏr-*kĕs*-trĭ-ŏn.) } ment combining the power and variety of a full orchestra.

Organ. The largest and most harmonious of wind-instruments of music, of very ancient origin, used in churches and large concert halls. It contains numerous pipes of various kinds and dimensions and of multifarious tones and powers; in solemnity, grandeur, and rich volume of tone it stands pre-eminent over every other instrument. The pipes are made to sound by means of compressed air provided by bellows; it contains several sets (ranks), several or many pipes to each key on a *sound-board* above the *wind-chest*, whither the air is conveyed from the *bellows* through a *wind-trunk*. Two obstacles have to be removed before the air in the wind-chest can reach the *pipes*. *Pallets* closing *grooves* have to be pulled down, and *slides* below the mouths of the pipes have to be shifted. Each key is, by a complex mechanism (*sticker*, *roller*, *tracker*, etc.), in communication with a pallet. As soon as a key is pressed down the corresponding pallet gives the air access to a groove, above which are placed all the pipes belonging to the key. Still, no sound is produced, as the air is intercepted by the slides, each of which runs below the mouths of a whole rank of pipes (a complete rank of pipes being equal in number to the keys of the keyboard). Now, by pulling out a *stop*, one of the slides — which are flat boards with holes in them — is shifted in such a way as to bring the holes just below the mouths of the pipes. On drawing out one stop we can, by playing on the keyboard, make one of the ranks of pipes speak; on drawing out two stops, two ranks of pipes; and so on. The organ may vary greatly in size. A small organ may have but a single manual, while a very large one may have four or even five manuals, in addition to the pedals. These manuals are thus named:

ENGLISH	GERMAN	FRENCH	ITALIAN
Gt. org. manual	Hauptwerk (Man. I.)	Grand orgue (1r clavier)	Principales
Choir manual	Unterwerk (Man. II.)	Positif (2e clavier)	Organo di coro.
Swell manual	Schwellwerk (Man. III.)	Clav. de recit (3e clavier)	Organo d'espressione
Solo manual	Soloklavier (Man. IV.)	Clav. des bombardes (4e clav.)	Organo d'assolo
Echo manual	Echoklavier (Man. V.)	Clav. d'echo (5e clavier)	Organo d'eco

There are numerous *stops* on the manuals, as, for example — open diapason, double-diapason, stopped diapason, principal, fifteenth, flute, dulciana, gamba, bassoon. Mixture, sesquialtera, and some others are stops consisting of several ranks of pipes, sounding the fifth, third, etc., of the fundamental note in a higher octave, these last being intended to add the harmonics which are deficient in some of the pipes, especially in the stopped diapasons (see *Harmonics* and *Acoustics*). The pipes can be either of wood or metal. There are two distinct kinds of pipes: *flue-pipes* or *reed-pipes*. In flue-pipes the air is set in vibration by striking a sharp edge, in reed-pipes by a free reed of metal. See Zahm's "Sound and Music" for a full explanation of vibration of air in pipes. There are also stopped pipes and open pipes, the stopped ones sounding an octave lower than open ones of the same length, and having a much hollower tone. We use the term 8-foot, 4-foot, 16-foot, etc., in connection with organ-stops. 8-foot pipes give the pitch that we would get from a piano key; 4-foot, an octave higher, 2-foot, two octaves higher, 16-

foot an octave lower, etc. Thus, if we play the following note on different stops it would sound the following different pitches:



The pedals have also various stops and present a keyboard for the feet. By *couplers* the different manuals and the pedals can be combined with one another. Consult Gates' "Pipe and Strings," Hopkins and Rimbault's "The Organ," Wm. H. Clarke's "An Outline of the Structure of the Pipe-organ." See also *Stops* and *Pipes*.

Sometimes it meant the organ itself; at other times it meant that kind of choral accompaniment which comprehended the whole harmony then known, a constant succession of fourths and fifths. Overture (Eng.) (*ō*-vĕr-tshūr.)
An introductory part to an oratorio, opera, etc.; also an independent piece for a full band or orchestra, in which case it is called a *concert overture*. Lulli first gave shape to the overture in the seventeenth century. The overtures of Bach and Handel follow his style. These had a short and simple slow movement and then a quicker and longer fugal or contrapuntal one. Mozart founded the classical overture

in the *sonata-allegro* form (which see). Mendelssohn was the chief founder of the concert overture, while Beethoven established the freer *dramatic* style. The medley overture, which began in England, is a succession of tunes from an opera, placed in contrast. Most light operas, and many of the operas of Rossini have the medley form. See also *Prelude, Vorspiel.*

Ped. An abbreviation of pedal.

Pedal. This word is used in many different ways in music, but always has reference to some mechanism moved by the foot. The most general usage of the word applies to the *piano pedals*. The object of the right-hand piano-pedal is to raise the dampers from the wires, so that the sound may be prolonged after the finger of the player has left the key. This device existed upon the old harpsichords in the shape of a knee-stop. John Broadwood, in London, first introduced the pedal on his pianos in 1783. The marking of this pedal is generally *Ped* for its application and ✱ or ⏚ for its discontinuance. *Con pedale*, or *con ped.*, indicates the employment of the damper-pedal, without explicit directions as to when to apply and to release it. The German terms *senza sordine* (without dampers), also means to *employ* the damper-pedal, and *con sordine* to *cease* using it. Another system which has found vogue in America is the following mark ⌙ indicating exactly when to put down and when to release the damper pedal. As it is the bass notes which are generally sustained in piano-playing, it was desirable to have a damper-pedal which should sustain the lower tones without blurring the upper ones. This has been introduced in the *bass damper-pedal* (often the centre pedal when there are three upon the piano) which lifts the dampers from the *lowest* strings only. A still greater improvement has been made in the *sostenuto pedal*, which, on being pressed down, raises only those dampers which belong to the notes which are being held down by the player at the time of its application. By this means we can sustain any note, or notes, at will. The damper-pedal has no effect upon the highest notes of the piano since these are not provided with dampers. This is done that the high tones may furnish overtones (see *Acoustics* and *Harmonics*) when the lower tones are sounded. The pedal at the left hand is called the soft pedal. It is to decrease the tone of the strings. The majority of the notes on a modern piano have three strings to each key or tone. On the grand piano, and on some uprights, the soft pedal pushes the entire action, keys, hammers, etc., to one side, so that the hammer, when the soft pedal is depressed, strikes but *one* of these three wires. Therefore, the soft pedal is marked *una corda* (one string), and the sign for releasing it is *tre corde* (three strings). (See also *a due corde*.) The Germans also use the words *mit Verschiebung* (pushing aside) for the soft pedal, and *ohne Verschiebung* for its release. The soft-pedal mechanism on the majority of upright pianos simply brings the hammer nearer the wire, so that it cannot deliver as strong a blow. On the old square pianos the soft pedal placed a piece of felt between the hammer and the wire, thus muting the sound, but also altering its quality. This device is still applied to some pianos as a *practice-pedal*, so that the pianist need not disturb the neighborhood with her exercises. Sometimes this practice-pedal is set permanently by a stop, which is drawn out when it is desired to mute the instrument, and pushed back when the normal tone is desired. On the *organ* the pedals are a set of keys played with the feet, and present-

ing different tone-qualities according to the stops used, exactly as with the manuals. Sometimes these pedals are built in a fan-like radiation from the player, for greater convenience. Pianos are sometimes built with a pedal-keyboard to assist organists in practising their feet without the necessity of going to the organ. There are also mechanical pedals upon the organ, such as the *swell pedal*, which automatically opens the blinds which surround the swell organ and thus increases the volume of its tone. There are also pedals which draw all the stops, pedals which act as couplers, etc. The piano *damper-pedal* is often miscalled the *loud pedal*, but it should be used for its sustaining effect and not for loudness. Pianos are generally provided with three pedals, the right-hand one being the *damper-pedal;* the middle one the *bass damper-pedal*, or the *sostenuto pedal* (sometimes also the *practice-pedal*), and the left-hand pedal always the *soft pedal*. There is generally no distinguishing sign for the *bass damper* or the *sostenuto*, the sign of the *damper-pedal* being used for all three. The soft pedal is sometimes called *harp pedal*, and in France, *petite pedale*.

Phonograph. An instrument invented in 1877, by Thomas A. Edison, by means of which sounds, either vocal or instrumental, the tones of the speaking voice, and even noises, can be recorded and reproduced. The records are made by a steel point working upon tubes of wax. In the improved phonograph (1895), wax was first substituted for tin-foil, which had been employed in the earlier phonographs. Still further improvements led to the employment of gutta percha. There are constant improvements being made upon this instrument, and it seems probable that what a generation ago seemed only a plaything, is to develop into a most important discovery. At present, in the improved instruments one can hear reproductions of orchestral works, of military band pieces, of songs executed by the greatest *prime donne*, in which the *timbre* is wonderfully preserved, of speeches and songs in many different languages, etc., etc. It is probable that the phonograph will be gradually perfected and its scope greatly widened. Pianoforte or Piano. The piano comes from the combination of the two instruments of antiquity, the *Dulcimer*, and the *Monochord*. The immediate predecessors of the piano were the *Clavichord*, the *Harpsichord*, and the *Spinet* (see these words). The principle of striking the wires of the instrument with hammers was invented by Cristofori, a native of Padua, Italy, about 1710. The invention seems to have sprung up simultaneously in various countries, for very soon after (without knowing of the Cristofori invention) a Frenchman named Marius, a German named Schroeter, and an English monk at Rome, Father Wood, all brought forth the hammer action, but Cristofori was probably the first inventor of it, and his instruments, of which two still exist, were much the best. The name of the instrument came from the fact that the Harpsichord, called in Italy *Clavicembalo*, could not shade. Therefore Cristofori's instrument, which could alter the power of the tones, was called *Clavicembalo con piano e forte*, i.e., a harpsichord which could play soft and loud. The name has been shortened since that time. There are some extreme purists who attack the use of the word *Piano* and insist upon the full term *Pianoforte*, forgetting that if the former term is incorrect the word *pianist* is equally so, and the artist must be called a *pianofortist*. The piano at first made but slow headway. Bach thought it only fit for playing rondos and light music. It was only when Beethoven threw his influence on the side of the piano that the instrument began to outstrip its weak-toned or monotonous predecessors. (See *Technique*.) Great improvements were made in the piano in Germany, Silbermann manufacturing very sweet-toned instruments, and Stein inventing the soft pedal. But the best pianos at the beginning of the nineteenth century were made in England, where an Alsatian, named Erhardt, afterwards changed into Erard, and a Scotchman named Broadwood, made many improvements in the instrument, the latter inventing the damper-pedal. (See *Pedal*.) Cramer, Clementi, and Czerny developed the technique of the instrument, and the invention of the full grand piano caused Beethoven to produce his greatest sonata, in B flat, Op. 106. To describe the mechanism of the piano, its various shapes, etc., would scarcely be within the scope of a volume of this kind, but the student will find the following useful works of reference for details, Weitzmann's "History of Pianoforte Playing," Rimbault's "The Pianoforte," Hopkins' "Description and History of the Pianoforte," Bie's "Pianoforte" and Gates' "Pipe and Strings" (a short description of Piano, Violin and Organ). America soon began to outstrip the European countries in the manufacture of pianos. Probably the first piano made in this country was manufactured by John Behrent, in Philadelphia, in 1774. Boston at one time achieved preëminence in this branch of manufacture, through the invention of the iron bed-plate, by Jonas Chickering in 1843. In 1853, the house of Steinway was founded in New York, and since that time America has made as many and as good pianos as any country in the world. For details of the early stages of the piano industry in the United States, see Elson's "History of Music in America." The piano is given the following names in foreign countries: Germany, *Klavier;* France, *Piano;* Italy, *Piano*, or *Pianoforte*. The frame of the piano is now generally cast in a single piece, with cross-bars and bracings made to resist an enormous tension, for the total strain upon a concert-grand piano (called *Flügel* in Germany, and *Piano a queue* in France) is not far from thirty tons. Below this frame is the soundboard, of

almost the entire length and breadth of the instrument. Upon the soundboard is a bridge which supports the strings, and transmits their vibrations to the soundboard. The strings of the upper five octaves of the piano are three to each single tone (called a *unison*), the lowest octaves having two strings or one to a unison. The lowest strings are woven around with copper or soft iron to cause them to vibrate more slowly. The *action* of the piano consists of its mechanism for striking, and consists of the key, the hopper or escapement (which throws the hammer against the wire), and the hammer.

Piano-player. An invention for playing the piano mechanically, which was first perfected in 1897. There are many devices for such playing which are marketed at present. The principle of almost all of them is a motive power of two pedals, like those of a cabinet-organ, which revolve a roll of heavy paper on which there are perforations which give the value of the notes and their pitch. There are also stops which regulate the expression, speed, and dynamic force of the strokes. There are more than sixty automatic fingers which are moved by the mechanism. The apparatus is not generally attached to the piano, but is quite separate, and set in front of it, with its fingers in proper position. Some pianos are now built to contain the piano-player as part of the mechanism of the instrument. These pianos may be played by the fingers in the usual way or automatically as desired. In addition to the numerous automatic piano-players there are similar devices made for the organ, by which it can be played automatically, although it is also furnished with a keyboard for manual playing. For the several inventions of this character, there is now an overwhelming repertoire of perforated rolls representing every branch of music, even to the most classical. By means of these inventions a person without any technical knowledge of the instruments can become familiar with their chief masterpieces, playing them himself.

Pipe. Any tube formed of a reed, or of metal, or of wood, which, being inflated at one end, produces a musical sound. The *pipe*, which was originally no more than a simple oaten straw, was one of the earliest instruments by which musical sounds were attempted. (See *Horn*, *Stop*, and *Organ.*) Organ-pipes divide into two classes, the *reed* and the *flue-pipe.* The reed-pipe has its column of air set in vibration by means of a reed which is set in a box or reservoir. The air being forced into this box can only enter the pipe by pushing aside the reed, which is called the *tongue.* When this is lifted up, the air passes through the fissure; when the tongue springs back by its own elasticity, it closes the passage. The vibration of the tongue induces a rapid opening and closing of this fissure; the air penetrates at intervals, in regular puffs, and thus a sound is obtained. The *flue-pipe* is caused to sound by directing the wind against a thin edge in the mouth of the pipe, only a slight portion of the current of air entering the pipe, but this causes the column of air within to vibrate. Flue-pipes may be stopped or open (see *Organ*). For description of the method or vibration of various kinds of pipes, see Blaserna's "Sound and Music," Zahm's "Sound and Music," and Pole's "Phi-

losophy of Music." A single pipe can, if desired, produce not only a single tone, but an entire series of tones.

Piqué (Fr.) (pī-*kā.*) } To play on a vio-
Piquer (Fr.) (pī-*kā.*) } lin, etc., a series of notes a little staccáto, and with a light pressure of the bow to each note.

Pitch. The acuteness or gravity of any particular sound, or of the tuning of any instrument. Pitch can most scientifically be defined as the *rate* of *vibration.* Rapid vibrations mean a high tone, slow vibrations a deep one. It seems strange that one cannot represent a fixed tone, as, for example, middle C, to the mind by a set number of vibrations, but the standard of pitch has always been a variable one and the note in question might consist of more or less vibrations according as it belonged to a higher or lower standard of pitch. Thus the note A, which in Paris at present has 435 vibrations, in 1858 was given 448, and in 1699 had only 404, while Handel's tuning-fork, dated 1740, gives the same note 416 vibrations. The standard of pitch has been gradually rising since the days of Bach and Handel, in whose time it was about two-thirds of a tone deeper than at present. *Concert-pitch* does not mean any definite pitch, but merely the pitch which this or that manufacturer chose as best suited to his instruments. It was, however, always a high pitch. In 1859, the French government reformed the matter of the varying and acute *concert-pitches* by establishing the pitch of one-lined A (the scientists' A^3) at 435 vibrations per second. Prof. Charles R. Cross, in his "Historical Notes Relating to Musical Pitch in the United States," says: "In 1889, the National Music Teachers' Association at its Philadelphia meeting adopted the French pitch, and the National League of Musicians, at Milwaukee, in March, 1891, also urgently recommended the adoption of this standard. For several years prior to this date, the question of bringing the standard pitch used for pianos and organs into unison with the low pitch which had come to be the generally accepted pitch for orchestral use, had been agitated by a number of persons engaged in the manufacture of pianos and organs, and especially by the late Gov. Levi K. Fuller, of the Estey Organ Co., of Brattleboro, and Mr. William T. Miller, of Boston. Finally, at a meeting of the Piano Manufacturers' Association, held in New York, March 31, 1891, it was unanimously decided that it was desirable that a uniform pitch should be adopted in the United States, and a committee was appointed, of which Mr. William Steinway was chairman, and Gov. Levi K. Fuller, secretary, to consider what standard should be adopted. This committee collected much evidence relating to the subject, and in response to a request therefor, received expressions of opinion from a large number of manufacturers and others interested in the determination of a standard, together with sample tuning-forks giving the pitch then in use by those sending them. The committee reported in favor of the adoption of the A of 435 double vibrations per second as a standard of pitch, and their recommendation was adopted by the association. It was also decided to call the newly adopted standard the *International Pitch.* The International pitch is, of course, identical with the French pitch, each having an A^3 of 435 double vibrations." Germany uses a pitch slightly higher than this. The *relative* pitch of two tones in proportion to each other has been determined, even in ancient times, by the measurement of the segments of a vibrating string, or of a tube, the proportion of length agreeing with the proportion of vibrations. The proportions of pitch in true intervals, according to scientific law, would be as follows:

Octave.	Major seventh.	Minor seventh.
2 / 1	15 / 8	16 / 9
Major sixth.	**Minor sixth.**	**Perfect fifth.**
5 / 3	8 / 5	3 / 2
Diminished fifth.	**Perfect fourth.**	**Major third.**
36 / 25	4 / 3	5 / 4
Minor third.	**Major second.**	**Minor second.**
6 / 5	9 / 8	16 / 15

The logarithms of these ratios would be as follows:

Octave.	Major seventh.	Minor seventh.
301	273	250
Major sixth.	**Minor sixth.**	**Perfect fifth.**
222	204	176
Diminished fifth.	**Augmented fourth.**	**Perfect fourth.**
158	143	125
Major third.	**Minor third.**	**Major second.**
97	79	51
	Minor second.	
	28.	

Thus, if middle, or one-lined C has 260 vibrations per second, this note being a perfect fifth above it would have the proportion of three to two, *i.e.*, three-halves of 260=390; this note an octave above the last would have twice its vibrations, *i. e.*, 780; this note a major third above middle C would have five-fourths of 260 = 325; and in the table of logarithms a fifth added to a fourth, a minor third to a major sixth, a minor second to a major seventh, etc., will give the logarithm of the octave. The above would be the proportion if any musical interval were given in true intonation, but in our system, only the octave intervals are thus given. See *Tempered Scale.* Consult Pole's "Philosophy of Music" for full tables of relative pitch of intervals. For names of notes on different pitches (octaves) see *Tablature.*

Polonese.
Polonoise.
A Polish dance written in $\frac{3}{4}$ rhythm, and containing every contrast possible. The melody contains runs, skips, and many artificial groupings, and syncopation occurs freely both in the melody and the accompaniment. The accompaniment has many rhythmic changes in its construction, but this rhythm predominates:

The melody is often completed with the third beat of the measure. The polonaise, as its name indicates, is a Polish dance, and was as much of a processional as a dance, the former characteristic being clearly perceptible in some of the polonaises of Chopin and Liszt. The bolero is similar to the polonaise, but has not its dignity and loftiness. The bolero is of Spanish origin.

Polyphonic. *Polyphonic music* is *many voiced* or *plural-voiced* music, and is where the music is formed of two or more different melodies going on simultaneously. This is contrapuntal music, which had its origin about the year 1200, and was developed into a science by the early Flemish composers, in the fourteenth, fifteenth, and sixteenth centuries. It preceded homophonic music by many centuries, for the first attempt at a method of harmonic construction was printed in 1722, (by Rameau), and the first practical method of Harmony, by Catel, was published as late as 1790. *Homophonic music* is *united sounding*, that is, music of different parts, which, however, are blended into a single mass. Such music, represented by the modern harmonic progressions, is not two-hundred years old. Some writers make no distinction between the words *monophonic* and *homophonic*, but the definition above given will nevertheless be clearly grasped by the student, and the necessity of a distinction between the two schools understood. *Monophonic music* is *single sounding*, that is, melody, or passages given in unison. For countless ages the world was satisfied with this species of music, the division of music into parts being scarcely more than seven hundred years old. It is probable that all the music of the ancient world was monophonic, although there are some indications that the ancient Greeks employed a *drone bass* occasionally, and called it *Sumphonia.*

Pont-neuf (Fr.) (pŏnh-nŭf.) A street ballad; a vulgar song.

Portaménto (It.) (pōr-tä-*men*-tō.) A term applied by the Italians to the manner or habit of sustaining and conducting the voice. It is also used to connect two notes separated by an in-

terval, by gliding the voice from one note to the other, and by this means anticipating the latter in regard to intonation. Unfortunately there is another, totally different use of the term, in piano music; in this latter *portamento* is applied to a pressing accent, with some degree of separation, written thus:

The word *portamento* is decidedly misapplied in this case, for it means *carried over*, which is by no means the effect desired when the above sign is written. The fact that the singer uses the word in another, and its true sense, would seem to make a change desirable, and we suggest that the term *Demi-marcato* be applied to this mode of execution.

Portaménto di voce (It.) (pōr-tä-*men*-tō dē *vō*-tshĕ.) Carrying the voice; the blending of one tone into another.

Prelude. A short introductory composition, or *extempore* performance, to prepare the ear for the succeeding movements. The word *prelude* has been applied to compositions of a free and improvised character. Chopin's preludes are not introductory to any other movements. Bach's forty-eight preludes, in the "Well-tempered Clavichord," are introductions to the fugues which follow them, yet they are also quite independent pieces. In opera the distinction between *prelude* (or *vorspiel*) and *overture* lies in the fact that the overture is an independent piece while the vorspiel leads directly into the opera. Gluck was the first to use the prelude before the opera in this manner. His preludes lead into the first scene of the opera, and in some degree prepare for it. Wagner, when he promulgated his views regarding the continuity of the music in an opera, was bound to sacrifice the overture (a distinct and separate number), and substitute the *prelude.* Therefore, while Wagner's early operas, "Rienzi," "The Flying Dutchman," and "Tannhäuser" have overtures, all the later ones, beginning with "Lohengrin" have preludes. Even "Tannhäuser" finally had its overture discarded by the composer, and a long prelude substituted. The Wagner *vorspiel* has no definite shape, but always presents some clear guiding motives (see *guiding-figure*) and develops them with much beauty. Thus the "Lohengrin" prelude is founded chiefly upon the *Monsalvat* figure, and the "Parsifal" prelude presents the *Communion, Holy Grail,* and *Faith,* figures in remarkable development. The *vorspiel* to "The Mastersingers of Nuremberg" is one of the finest examples of the modern operatic prelude. The prelude to the suite appears under many different names in the old compositions, and *intrada, preambule, fantasia, overture, toccata,* and *sinfonia,* are among the names used.

The free is without tempo mark and with only a few chords for accompaniment to sustain the intonation. The modulations are always very bold and free. Reed. The flat piece of cane placed on the beak or mouth-piece of the clarinet or saxophone. This is called a *single reed.* The *double reed* is the mouth-piece of the oboe, English horn and bassoon, formed of two pieces of cane bound together. A reed, in musical instruments, is a thin tongue of wood, or metal, against which a current of air is directed; the reed, swaying rapidly to and fro, breaks this current into intermittent puffs, which form the tone. Reed-vibrations generally produce many overtones, and therefore a rather thin and penetrating quality of sound. Cabinet-organs, oboes, clarinets, bassoons, etc., are examples of reed vibrations.

The repeat-marks of Beethoven, however, are generally respected. In the first movement of many of the older sonatas, there is a repeat at the end which is almost always disregarded. *Per contra*, the *first* repeat in such a movement (sonata-allegro) is generally observed. Sometimes the repeat-sign is made clearer by the addition of side-lines thus

7. 64th-rest.	Vierundsechzigstelp.	Seizième de soupir.	" " semibiscroma.

The *English* names are similar to those given to notes. See NOTES.

In some music the quarter-rest is written 𝄽 but as this is apt to produce confusion with the eighth rest—𝄾—it has been altered into 𝄽. The *whole* rest is not a definite value, as the others are. It means *a whole measure rest*, in *every* rhythm except $\frac{8}{2}$ or $\frac{4}{2}$. In these two rhythms it is the exact equivalent of a whole note, in value. All smaller rests have a definite and unchanging value. In $\frac{3}{2}$ rhythm a dotted whole rest would fill the measure, and in $\frac{4}{2}$ a double whole rest would be required.

Rhythmus (Lat.) (*rĭth*-mŭs.)
Rhythmus (Ger.) (*rĭth*-moos.) } The division of musical ideas or sentences into regular metrical portions; musical accent and cadence as applied to melody. Rhythm represents the regular pulsation of music. The

word *time* is constantly applied where *rhythm* is meant. Thus we have *common time, two-quarter time*, etc., which have nothing to do with the *tempo* of the music. In this book we have most frequently replaced the misuse of the word *time* by the more correct name *rhythm*. It is possible that the word *measure* might also replace the more faulty expression. *Three-quarter measure* would express much more than *three-quarter time*. While we deem it impossible to change every misnomer in music, we believe that a beneficial change is possible in this instance. See *Time*.

bass, and a double-bass. They are not adapted for additional crooks.

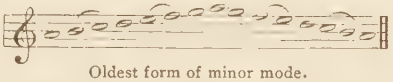
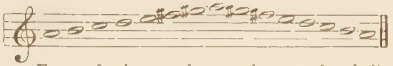
The saxophones are six in number, — the *sopranina*, the soprano, the alto, the tenor, the baritone, and the bass; they are played with a single reed and a clarinet mouth-piece. Scale (Lat., *Scala;* Ger., *Tonleiter;* Fr., *Echelle;* It., *Scala.*) The succession of tones upon which any music is built. The scales of different epochs and nations differ quite as much as their languages. It is impossible to demonstrate scientifically (by any laws yet discovered) the *reason* of the subdivisions made in some scales. The scale seems to have been, like the art of music itself, an invention of man, which did not always seek a foundation in scientific laws. We cannot *prove* that the scales which we employ are better than those used by other races or at other epochs. Our musical system makes use of the following scales:

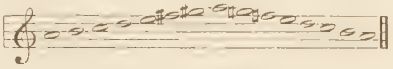
Diatonic major scale.



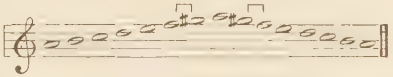
Oldest form of minor mode.



Form of minor mode sometimes used melodically.



Transition form of minor mode.



Modern or Harmonic minor mode.

Chromatic scale.

(Enharmonic Scale, merely theoretical, not used in practice.)

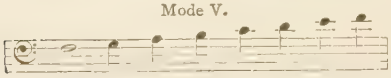
The Old Greeks had other scales which have caused much dispute among theorists. (For full essays upon these, see Stainer and Barrett's and Baker's Dictionaries of musical terms.) These led finally to the Gregorian tones or modes as follows:

AUTHENTIC MODE.

Mode I.

Mode III.

Mode V.



Mode VII.

PLAGAL MODES.

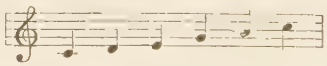
Mode II.

Mode IV.

Mode VI.

Mode VIII.

Greek names are attached to these Gregorian modes, but, because of the rearrangements of Glareanus (in the 16th century) we are not certain that these names are applied as they were in ancient Hellenic days. The Hindoo scale divides into third-tones and quarter-tones, in a manner that defies notation by our system, or performance upon our keyed instruments. The chief scale of China runs thus:



This is probably the most primitive scale now extant. Many Scottish melodies are written in this scale, as, for example, "Bonnie Doon," "Auld Lang Syne," and "The Campbells are Comin'." There is a scale much used in old folksongs running thus:

The melody of the favorite song of "Loch Lomond" is in this mode. The chief scale of the Byzantine music is as follows:

Leading to signatures (not comprehensible to those who understand only our own system) such as In Hungary the gypsies use the following scale:

and Paderewski used this very prominently in his opera of "Manru." Modern composers are beginning to enrich the *Materia Musica* by the use of many of these scales or modes. For fuller study of this subject, see Parry's "Evolution of the Art of Music," Hatherly's "Byzantine Music," Elson's "Folksongs of Many Nations," Pole's "Philosophy of Music," and Grove's Dictionary.

The *scena* is sometimes called *scena ed aria*, *recitative ed aria*, *cavatina ed aria*, etc. It generally forms part of an opera, but it may be an independent composition, as Mendelssohn's "Infelice," Beethoven's "Ah Perfido," etc.

Scherz (Ger.) (shĕrts.) } Play, sport, a
Scherzo (It.) (*skĕr*-tsō.) } jest; a piece of a lively, sportive character, and marked, animated rhythm; also one of the movements in a symphony. The *scherzo* was established by Beethoven, as a symphonic movement to take the place of the minuet which Haydn and Mozart had worn threadbare. The influence of the minuet upon the scherzo form is not difficult to trace, for, although a scherzo may be written in any rhythm and in almost any form, yet the great majority of scherzo movements are in $\frac{3}{4}$ rhythm, and possess a *trio*. (See *Minuet*.) All of Beethoven's symphonic scherzos are in triple rhythm, but in some of his other works $\frac{2}{4}$ rhythms appear in the scherzo movement. The scherzo was very much

like the minuet; but the dance-like character of the minuet-themes was absent, the treatment was freer, and development was possible. The contrast between the scherzo and its trio is often more marked than would be the case in a minuet, and the form is often much more developed than the minuet. It has become customary, with modern composers, to introduce folk-music, and especially folk-dances, into the scherzo. Chopin first made the scherzo an independent movement apart from the sonata or symphony.

Slide. A movable tube in the trombone (formerly in the trumpet), which is pushed in and out to alter the pitch of the tones while playing. It is more perfect than the valve, because it changes only the length of the air-column, not its direction and form; and also because every interval of pitch is obtainable; but it is more difficult of manipulation than the keys, or valves. A rapid run of two or more notes as, for example, the following:

is called a Slide.

Slur (Ger., *Legatobogen;* Fr., *liaison;* It., *legatura.*) A curve drawn over or under two or more notes, signifying that they are to be executed *legato.* The slur over two notes is called the short slur. The slur first appeared in notation in connection with violin-music, and was used to show how many notes were to be executed with a single stroke of the bow. Soon after this it was also admitted into vocal notation to indicate the number of notes to be sung in a single breath. It is almost impossible to give absolute rules for the execution of the slur, there are so many exceptions. Yet the following rules may apply in general cases: 1. When two notes of small denomination (quarter-notes or less) are connected by a slur, the first note is generally accented, the second played lightly; the tone of the first is to overlap into that of the second note; and the second note is frequently shortened. This example,

would often be played thus:

2. When the slurred notes are of a longer denomination, the second is not generally shortened. 3. When the second note is longer than the first, the effect of the slur is often nothing more than a *legato* mark. 4. In vocal music, both long and short slurs are often used merely to show how many notes are to be sung to a single syllable. The *long slur* (over more than two notes) is frequently a very indefinite sign. It is one of the most vague signs in piano-music, often merely indicating a legato execution, and not the phrasing. In vocal-music it is used properly as a phrasing and breathing-mark, but it is impossible to formulate any rules that will cover the contradictory uses of the long slur in piano-music. See Elson's "Theory of Music."

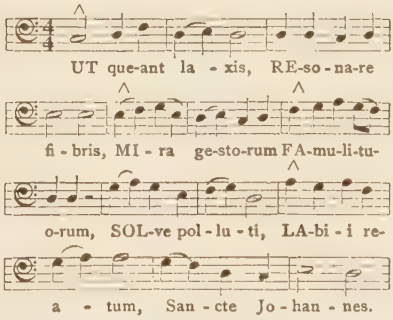
Solfaing. Singing the notes of the scale to the monosyllables applied to them by Guido. Guido was a Benedictine monk (b. Arezzo, about A.D. 1000) and taught music in the monastery at Pomposa, about 1032. He found great difficulty in his work because of the vagueness of notation, particularly in the matter of pitch. He observed that each line of a certain hymn which the students sang daily to St. John began with a different syllable, and also rose one degree at each phrase. The music was as follows:



Here was Guido's opportunity. He caused these syllables to be used to represent the notes by the students, who had already learned to associate them together in their minds, and the greater part of the modern scale was formed. It may be mentioned that

the French to-day use *ut* as the first note of the scale although other nations have changed it to *do*. Guido's scale was hexachordal, and contained no *leading-tone*. The seventh note was added in the sixteenth or seventeenth century, and received the name of *si*. The change of *ut* to *do* is attributed to Buononcini, about 1700.

Sonáta (It.) (sō-*nä*-tä.) **Sonate** (Fr.) (sō-*nät*.) **Sonate** (Ger.) (sō-*nä*-tĕ.) } An instrumental composition, usually of three or four distinct movements, each with a unity of its own, yet all related so as to form a perfect whole. It commonly begins with an allegro, sometimes preceded by a slow introduction. Then come the andante, adagio, or largo; then the minuet and trio, or scherzo; and lastly the finale in quick time. This form is applied not only to large piano sonatas, but to symphonies, string quartet, etc. The form of the sonata grew slowly from the first vague shapes used in the seventeenth century, which often resembled the suite. The sonatas of Domenico Scarlatti, Ph. Em. Bach, and Corelli, show the old form gradually crystallizing into two movements. O-

these, the first movement was very important, for it led to the *sonata allegro*, the most important single movement form of sonata and one which is even now constantly used for the first movement (and sometimes other movements) of the sonata, and symphony. Briefly stated, this form is follows:

EXPOSITION.	MIDDLE PART OR DEVELOPMENT. often	RECAPITULATION.
Chief Theme.	Followed by	Chief Theme.
Subordinate Theme in related key.	Returning Passage	Subordinate Theme (generally in Tonic key).
Closing Theme. (Repetition.)		Closing Theme.

Haydn first established the classical sonata form, although Ph. Em. Bach, Dittersdorf, Kozeluch, and others, produced sporadic works in very nearly the same shape. Mozart improved and Beethoven culminated the form. In the full sonata form the second movement would be in slow *tempo*. In a three-movement sonata the slow movement becomes the central movement of the work. The slow movement is the emotional or romantic part of the sonata, and is more free than the first movement. Some composers who are not successful in the sonata-movement or sonata-allegro form, are yet very expressive in the slow movement. Chopin is an example of this. The slow movement is generally in a related key to that of the first movement. Beethoven frequently used the key of the submediant for this part of the sonata. The *tempo* of the slow movement varies from *largo* (used by Haydn and others) to *allegretto* (used by Beethoven in his seventh symphony and elsewhere), but is most frequently either *andante*, or *adagio*. The slow movement has no fixed form, but is often in *song form*, *variation form sonata-allegro*, or *rondo*. The third movement (if the four-movement form is used) is a *minuet*, or *scherzo* (see these nouns, and also *Form*), but in the three-movement form this movement is omitted. Concertos omit this part. The forms chiefly employed in the finale are: 1. *The sonata-rondo*. 2. The *sonata-allegro*, but with less development than is used in the opening movement, as development should be the chief feature of the first movement, at least, in a large work. 3. *Grand variations*, which are certainly the best offset to the development of the first movement, since variation differs from development in keeping the harmonic shape unchanged. Examples of these modes of ending may be found in Beethoven's works, as follows: 1st mode, Sonatas Op. 7, and Op. 13. 2d mode, Sonata Op. 2, No. 1. 3d mode, Sonatas Op. 109 and 111. For further study of the sonata see Prout's "Musical Form," Pauer's "Musical Forms," Goetschius' "Lessons in Music Form," Elson's "Theory of Music."

The *song* deals with emotions; the *ballad* tells a story. *Song form* is a musical form originally derived from vocal music. (See *Form.*)

Folk-song is a simple song (frequently a ballad) which is popular with the common people. *Songs* are chiefly of two styles of composition. 1st. The *strophe form* in which the music is set to the first stanza and then repeated to each succeeding stanza. 2d. The *art-song* (or *through-composed — Durch componiert* style) in which each stanza receives separate musical treatment according to its contents. Among Schubert's songs "The Miller's Flowers" and "Impatience" are strophe forms, and the "Erl-King" and "The Wanderer" are *art-songs*. The *strophe form* can only be artistically employed when there are very few stanzas in a poem and all of the same general purport, as in Schubert's "Impatience."

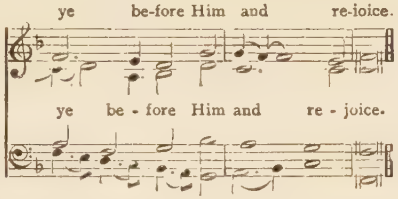
The soprano is the highest part in concerted vocal music, and carries the air, or melody, in any modern composition that presents harmony, or counterpoint. But this was not always the case. In the early days of counterpoint it gave support to the melody, which always lay in the *tenor*. See *Tenor*. It was then called "*Discantus*," which indicated that it was "against the melody," and not the melody itself. We give an example of this old kind of counterpoint with the melody in the *tenor* part, the *discant* giving counterpoint against it: it is "Old Hundred," in Dowland's setting of about three centuries ago:



It was about three hundred years ago also, that the change in part-writing took place. Lucas Osiander and Hans Leo Hassler should be mentioned as reformers in music. The innovation which they made may seem a very slight one, but it was none the less of great importance. It was the giving of the melody, in part-music, to the highest voice, changing its name from *discant* to *soprano* (meaning *above*). To us it seems self-evident that this voice should carry the tune, but, as the above selection shows, it was not so with the early composers. They desired to make the most of their discant, and the melody, given in the tenor, in a part-song, served only as a peg whereon to hang the counterpoint. See *Voice*, *Tenor*, *Descant*.

Suite de danses. A set of dances. It was generally known as the *suite,* and probably began not far from the year 1600 in the freer *Partita.* Both had their origin in dances. Dances were composed of marked and attractive rhythm, differing essentially from each other in character, and capable of very contrasted effects. In Spain were the stately *Sarabande,* the dignified *Pavane,* and the more rapid *Loure;* in Italy, the gay *Courante,* the sedate *Chaconne,* and the quiet *Passa Mezzo;* in England, the *Hornpipe,* the *Country Dance,* and others embraced in the general Continental appellation of *Anglaise;* in Germany the cheerful dance known in the works of Mozart and others as the *Danza Tedesca;* in France the noble *Minuet,* and half-playful *Gavotte,* the merry *Branle,* the dashing *Passe-pieds,* and the pleasing *Rigaudon;* and, in all of these countries, the hearty *Gigue,* or *Jig.* The essence of form is contrast, and it is not surprising that the composers soon invented a simple form by combining two or three dance-rhythms of contrasted style and tempo into a single cycle form. The contrasts of the suite were well-established by Bach, and the movements gradually assumed the following order in his suites: A prelude or not, as the composer desired, after which came the *allemande,* the *courante,* the *sarabande,* the *intermezzi,* and finally the *gigue.* The *intermezzi* were from two to four dances, or other movements, left to the choice of the composer, as *minuets, gavottes,* etc. They were generally of moderate tempo, in order that they might not destroy the effect of the *sarabande* and the *gigue,* between which they came. The suite, in the eighteenth century, had all of its movements in the same key,

a uniformity which tended to monotony. Handel left the precise order of movements prescribed by Bach, and his suites are very free — even the dance names being discarded in some of them. Sometimes in the old suites, a movement could be duplicated, and two *courantes*, two *minuets*, or two *bourrées* appear. The modern orchestral suite is of a much freer character and is practically a small symphony. Franz Lachner wrote many orchestral suites, and suites by Bizet, Massenet, Tschaikowsky and Moszkowski have become well-known. These are less ambitious than the symphony, generally beginning with a march, or variations, having a slow movement near the centre, and ending with a lively finale. They have generally four movements.

Symphonie (Fr.) (săṅh-fō-nē.)
Symphonie (Ger.) (sĭm-fō-nēe.)
Symphony (Eng.)
In the first half of the eighteenth century *symphony* meant any instrumental prelude, or interlude, or postlude. In this sense Handel uses it in "The Messiah," and Bach thus called his three-part inventions *symphonies*. It now means a grand composition of several movements, for a full orchestra. The symphony in its present form was introduced by Haydn, and generally consists of an allegro movement (sometimes with a slow introduction), a slow movement, a *minuet*, or *scherzo*, and a *finale*. It is a *sonata for orchestra*. (See *Sonata*.) Beethoven introduced the *scherzo* to take the place of the threadbare *minuet*. (See *Minuet* and *Scherzo*.) The greatest symphonists are Beethoven and Brahms, although the pioneer work by Haydn and Mozart must always receive due acknowledgments. Beethoven's nine symphonies remain the purest models of the symphonic form, although the G minor symphony, and particularly the *Jupiter* symphony, by Mozart, show that the form had become great even in the eighteenth century. The four movements of the symphony are intended to be in the best contrast with each other. Thus, the first movement, which is in the *sonata-allegro* form, may be called the most intellectual movement of the work. The second (which is generally *andante* or *adagio*) is the romantic, or emotional movement. The third (usually the *scherzo*, or *minuet*) is the dainty, playful or popular movement, and the *finale* is the brilliant, and climax movement. In the early symphonies the finale was always jovial, copying the jollity of the *gigue*, which ended the *suite*. Beethoven reformed this defect and gave to the finale a broader and more ambitious character.

The chief symphonies of Haydn were those that he wrote for London during his two visits to England. These twelve are called the *English* symphonies. The symphony did not stand revealed in all its grand proportions until 1804, when Beethoven brought forth his *Heroic* symphony, the greatest of the world up to that time. In modern times the symphony has been growing more free than formerly. Brahms in his four symphonies still held to the classical path and proved that there was much to say in this form yet; but Bruckner, Mahler, St. Säens, D'Indy, Tschaikowsky, and many others, have deserted the strict form — sometimes to advantage, but more generally the reverse. The logical outcome of the attempts at

freer expression came in the *symphonic poem*, which has found its broadest expression in the works of Richard Strauss. The *poème symphonique*, which Liszt established, did not signify a *symphonic poem*, for the word *symphonique* in French merely meant *orchestral*. But many of Liszt's successors embodied the effects of the symphony in the symphonic poem, so that it has, in some degree, become the modern representative of the classical form. The *symphonic poem* has no fixed shape, but relies for its effects chiefly upon figure development, and very powerful orchestration. Some of the symphonic poems of Richard Strauss are the broadest orchestral works at present existing. For further information regarding symphony see Grove's "Beethoven's Nine Symphonies," Weingartner's "Symphony since Beethoven," Elson's "Famous Composers and their Works" (new series), article "Some Orchestral Masterpieces," and Arthur Elson's "Modern Composers of Europe."

Syncopation (Eng.)
Syncopatio (Lat.) (sĭn-kō-*pä*-shĭ-ō.)
Syncope (Fr.) (săn*h*-kōp.)
An unequal division of the time, or notes; irregular accent; binding the last note of one bar to the first note of the next; accented notes occurring on the unaccented part of a bar. Syncopation is an artificial accent, an interruption of the natural pulsation of the music. It can be produced by giving an accent where none is expected, by taking away the accent from a point where it is expected, or by both methods combined. The natural rhythm must be restored after the syncopation has been used for a short time, otherwise the ear will accept the artificial accent as a natural one and the effect of syncopation be lost. Syncopations in accompaniments must be strong to be effective.

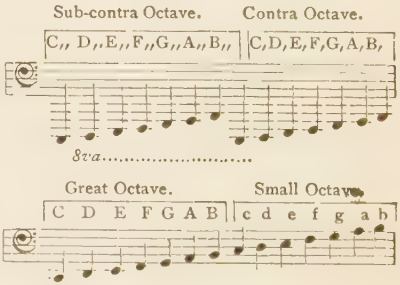
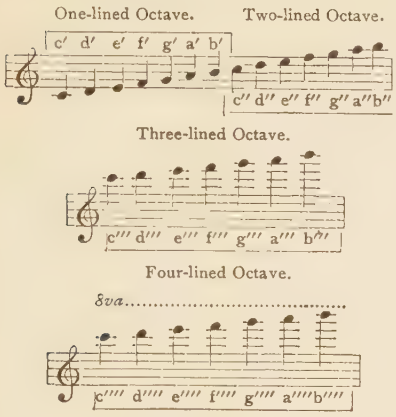
Tablatúra (It.) (täb-lä-*too*-rä.)
Tablature (Fr.) (tä-blä-*tür*.)
Tablature (Eng.) (*tăb*-lä-tshūr.)
Tabulatur (Ger.) (tä-boo-lä-toor.)
A term formerly applied to the totality, or general assemblage of the signs used in music; so that to understand the notes, clefs, and other necessary marks, and to be able to sing at sight, was to be skilled in the *tablature*. The method of notation for the lute, and other similar instruments, was also distinguished by this appellation. The musical rules of the master-singers were also called the *tablatur*. But the chief use of the word is to designate the *pitch* of different notes in different octaves by letters with numerals, accents, or adjectives attached. The principle of the tablature of pitches dates back to the time of Guido of Arezzo, about A. D. 1000. The chief system used by musicians is the following:





In many cases, however, the lines are made horizontal instead of vertical, thus, $\overline{c}$, $\overline{\overline{e}}$, etc., and sometimes the subcontra-notes are written with three capitals (CCC, DDD, etc.), and the contra notes with two (CC, DD, etc.), instead of having lines attached. Another method is to count the octave by the length of an open pipe required to produce its fundamental tone. As it would take a pipe 32 feet long to produce subcontra C (the lowest tone audible to the human ear), that note is called "32-foot C" and the same adjective is applied to all other notes in the "32-foot" octave. The contra octave is called the "16-foot" octave, the great octave the "8-foot," the small octave the "4-foot," the one-lined octave the "2-foot," etc. Still another method of tablature is used by scientists and acousticians. In this the subcontra notes are marked thus, C_2, D_2, etc.; the contra notes C_1, D_1, etc.; the notes of the great octave c^1, d^1, etc.; the small octave c^2, d^2, etc.; the one-lined octave c^3, d^3, etc.; the two-lined octave c^4, d^4, etc.; and thus up the scale. It will be well, therefore, not to use numerals in any other system; c″ for example (or $\overline{c}$) must not be written c^2, but c^4; and the tuning note of the orchestra, one-lined A, is  *not* a^1, but a^3. A lack of knowledge of this system has led to some confusion in otherwise valuable books of reference. It may also be stated that the English call the small octave the *tenor octave*, and the one-lined octave the *middle octave*. There is also a vocal nomenclature in the higher octaves, as follows: alt octave and altissimo octave. Thus three-lined C would be called *C in alt*, and three-lined G would be *G in altissimo*. See *Alt*.

Temperament. The adjustment of the imperfect sounds of the scale, by transferring a part of the defects to the more perfect ones, in order to remedy, in some degree, the false intervals of the organ, pianoforte, and similar instruments, whose sounds are fixed; that equalization of the intervals, in tuning, which brings their whole system as near as possible to that of the diatonic scale. That equalization, or tempering of the twelve sounds included in an octave, which renders all the scales equally in tune; the imperfection being divided equally amongst the whole. The division of the octave into twelve *equal* semi-tones, in defiance of the law of nature, which demands a different proportion. The introduction of equal temperament was a modification of the scale of nature that alone made music on keyed instruments practicable. The scale of true intonation, with its varying intervals, beautiful in progressions and harmonies, and eminently fitted for the vocalist, or violinist, could only be employed on the organ when modulation was absent, and the work remained entirely (or nearly so) in one key. By the simple device of dividing the octave into twelve equal semi-tones, Willaert (about 1550) solved a problem that, although not of vast importance in his day, when modulations were but sparingly used, became each century of greater dimensions. This reform, because of the reason stated, was but slowly adopted by the world. As the field of music began to enlarge, a system of partial temperament was adopted which allowed the organist to play in a few keys closely related to F and C, without getting discordantly out of tune, but such keys as F ♯ major, D ♭ major, etc., were deemed altogether unnecessary, and were not used until a much later epoch. The tuning which is at present employed by all civilized nations is a compromise. The octave which must always be taken as a true interval, its upper note vibrating twice as fast as its lower, is divided into twelve equal semi-tones, all a trifle out of tune but none distressingly so, and this *tempered scale* as it is called, admits of the use of all the twenty-four major and minor keys with equal facility. This system of *equal temperament* was advocated as early as the sixteenth century by Willaert, Zarlino, and others; but it was not thoroughly adopted until J. S. Bach, in his noble collections of preludes and fugues entitled "The Well-tempered Clavichord," proved the practicability of the system, by writing compositions in all of the different keys, where before only a very limited number had been employed. The "Well tempered Clavichord," Part I, was given to the world in 1722, and Part II, in 1742, and settled the matter of the division of the scale forever, for from this epoch dates the beginning of *freedom of modulation*. Regarding the effect of the tempered scale as compared with the scale of true intonation, the following facts not generally known to amateurs, may be stated. The tempered scale is close enough to just intonation not to shock the ear of any musician (especially on the pianoforte) and admits of modulations freely into all keys. The interval of the major third is, however, an exception to this, and causes the major triad to sound somewhat harsh. On the organ the tempered major triad is especially disagreeable. The tempered scale is, after all, only a compromise, an escape from a difficulty, and while it is necessary upon keyed instruments, is adhered to far too faithfully by violinists and vocalists, who, when unaccompanied, could obtain a far richer, mellower, and finer effect by keeping to the scale of true intonation. The deflections from true pitch in the different intervals of the tempered scale may be thus summarized: The perfect fifth is one-fiftieth of a semi-tone flat. The perfect fourth is one-fiftieth of a semi-tone sharp. The major third, one-seventh of a semi-tone sharp. The minor third, one-sixth of a semi-tone flat. The major sixth, one-sixth of a semi-tone sharp. The minor sixth, one-seventh of a semi-tone flat. The minor seventh, one-sixth of a semi-tone flat. The major seventh, one-eighth of a semi-tone sharp. In the scale of true intonation, or the enharmonic scale, there would be a distinct differ-

ence between such notes as A ♯ and B ♭, or C ♭ B ♮, but in the tempered scale these distinctions disappear.

The last three figures in the above table are decimals in each case. The pitch of the sharps and flats according to the *enharmonic* scale is not given, as they are not used in practical music, but the table will readily show the exact amount of deflection from true pitch of any note used in our system. See *Pitch*. Consult Pole's "Philosophy of Music" and Zahm's "Sound and Music" for details of temperament.

Tempête (Fr.) (tänh-*pāt.*) A boisterous dance in ⅔ time.

Tempo (It.)(*tem*-pō.) The Italian word for *time*. Tempo is rather loosely defined as the speed of the music, but it ought rather to be regarded as the speed of the rhythm, the rapidity with which the natural accents follow each other. In the mediæval music the *tempo* marks were very few. Jean de Muris, about 1350, wrote that there were three speeds in music — quick, slow, and medium. At about this time one might find an occasional *C* marked in the music, meaning *celeriter*, to accelerate the *tempo;* or a *T* for *teneatur*, similar to the modern *ritenuto*. The marks of *tempo* began (practically) with the beginning of opera. When emotional and expressive composition began, about A. D. 1600, the marks of *tempo* at once commenced to appear. So far as we have traced the matter, the word *adagio* (misspelt *adazio*) in one of Frescobaldi's works was the beginning of proper tempo-marking. It should be remembered by the teacher that up to the beginning of the nineteenth century the tempo-marks were less extreme than at present; the slow movements were less slow, and the quick movements less quick than they are in the modern works. The chief terms used for speed are (from slowest to quickest) *grave*, *largo*, *larghetto*, *adagio*, *lento*, *andante*, *andantino*, *moderato*, *allegretto*, *allegro*, *presto*, and *prestissimo*. These Italian words have been given in this order by custom rather than by their literal meaning. *Andantino*, for example, literally means slower than *andante*, yet, by a misunderstanding, it is frequently used in exactly the opposite sense. (See *Anaantino.*) The slow tempo-marks are not so fixed in their succession as the others, and *larghetto*, *adagio*, and *lento* are used interchangeably by some composers. There are many other Italian words used for tempo-marks which will be found under their own headings. The words for *tempo* and expression are usually in Italian, although Schumann and Wagner used German, and Berlioz, French. It is best that Italian should be used for: 1st. It has been employed for three hundred years. 2d. It would be impossible to allow every composer (Russian, Hungarian, Norwegian, Polish, etc.), the use of his own language in music of world-wide importance. 3d. A universal language such as *notation* has become, must not have a language of terms less universal than itself.

Thorough bass. Figured bass; a system of harmony which is indicated by a figured bass. When there is no figure, it is understood that the common chord of such a note is to be used as its harmony. The following table will show the manner in which figures are used:

The figure 2 implies a 4th and 6th,
" " 3 " a 5th perfect, or diminished, according to the position of the note in the key.
The figure 4 implies a 5th, or 5th and 8th.
" " 5 " 3d and 8th.
" " 6 " 3d.
" " 7 " 5th and 3d.
" " 8 " 3d and 5th.
" " 9 " 3d and 5th.

A stroke through a figure directs the raising of the interval by a natural, or sharp, as the case may be. An accidental standing alone implies a corresponding alteration of the 3d of the chord. Horizontal lines direct the continuance of the harmony of the previous chord. If there are no figures under the previous chord, the line or lines direct the continuance of the common chord of the first note under which they were placed.

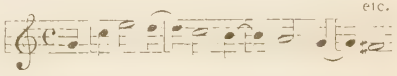
The name given in Germany to the notes between the C on the second added line above the treble staff and the next B above, inclusive; these notes are expressed by small letters, with three short strokes, also *thrice-accented octave*, or *three-lined octave*. See *Tablature* and *Temperament*.

Thumb-string. Melody-string of the banjo.

Tie. A curved line placed over two or more notes in the same position on the stave:



The tie is also called a *bind*, and the curved line, when used over notes representing different sounds, is called a *slur*. (See *Slur*.) These notes need not be written on the same degree of the staff, (although they generally are) for in the tempered scale (which see) the flat and the sharp of two contiguous notes can mean the same sound, and the following would therefore be an enharmonic tie:

If the two notes under the curved line have dots above them, the curved line is not a tie, but becomes a *portamento* (*demi-marcato*) mark. This is an example of such a mark:

If the second note only, in such an example, has a dot over it, the effect would be that of a short slur. The following, therefore, would be played as two notes,

the first receiving some degree of accent, and the second being played with lightness, and a little shorter than its written value.

Tief (Ger.) (tēf.) Deep, low, profound.

Tiefer (Ger.) (*tē*-fĕr.) Deeper; lower; 8va *tiefer*, octave below.

Timbre (Fr.) (tănhbr.) *Quality* of tone, or sound.

Timbrel. An ancient Hebrew instrument, supposed to have been like a tambourine.

Time. The measure of sounds in regard to their continuance, or duration. The speed of the rhythm. The rapidity with which the natural accents follow each other. This is the correct meaning of *time*. (See *Tempo.*) Nevertheless, an almost universal custom prevails of using the word *time* to express the *division* of the measure as well as the speed. Such division should properly be called either *rhythm*, or *measure*. There could be no possibility of being misunderstood if a composition marked  were described as being in $\frac{4}{4}$ *rhythm* or in $\frac{4}{4}$ *measure*, instead of *common time*. An eminent American teacher has suggested *meter* as a fitting word, but this would lead to confusion with hymns and poetical meters. As the word *time* is almost always used to denote the divisions of the measure, we present the divisions under this head. They are classified as even, triple, and peculiar. Even times are those where the measure divides naturally into halves. $\frac{2}{1}$, $\frac{2}{2}$, $\frac{2}{4}$, $\frac{2}{8}$, $\frac{4}{1}$, $\frac{4}{2}$, $\frac{4}{4}$, $\frac{4}{8}$, and $\frac{8}{8}$ are examples of such rhythms. The following signs are also employed: or for $\frac{4}{2}$, for $\frac{2}{2}$, and for $\frac{4}{4}$. When the measure divides naturally into halves or quarters and each of these subdivisions into thirds, the result is compound even time, as follows: $\frac{6}{2}$, $\frac{6}{4}$, $\frac{6}{8}$, $\frac{6}{16}$, $\frac{12}{4}$, $\frac{12}{8}$, $\frac{12}{16}$, and even $\frac{24}{16}$. Triple times occur when the measure divides itself naturally into thirds, as, $\frac{3}{1}$, $\frac{3}{2}$, $\frac{3}{4}$, $\frac{3}{8}$, $\frac{3}{16}$, and compound triple rhythms are those where the measure divides into thirds, and each of these thirds again subdivides into thirds, as $\frac{9}{4}$, $\frac{9}{8}$, $\frac{9}{16}$; even $\frac{18}{8}$ has been used. Septuple or quintuple times are where the measure divides into fifths, or sevenths, as, $\frac{5}{2}$, $\frac{5}{4}$, $\frac{5}{8}$, $\frac{5}{16}$, $\frac{7}{2}$, $\frac{7}{4}$, $\frac{7}{8}$, $\frac{7}{16}$. Sometimes when these rhythms are employed they are only an alternation of even and triple times. There are also compound derivations from these, and Scriabine has written on etude in $\frac{15}{8}$ time, being merely a $\frac{5}{4}$ time subdivided into triplets. Instead of the words *even* and *triple*, the English often use *duple*, or *binary* and *ternary*. We hope yet to see the whole of the misleading nomenclature

abolished and *even rhythm* and *triple rhythm*, come into use. There is also a comical error frequently made in imagining the sign for $\frac{4}{4}$ rhythm — C — to be a letter *C* used as an abbreviation for *common time*. The sign comes to us from the middle ages when the triple pulsation of music was held to be the only perfect rhythm, as the monks held that it represented the *Trinity*. It was written with the following sign, ◯, and was called *perfectum:* when the monks admitted an even rhythm, they called it *imperfectum* and broke the circle writing it thus — C.

Tonic Sol-fa. A method of teaching vocal music, invented by Miss Sarah Ann Glover, of Norwich, England, about 1812 (called by her the *tetrachordal* system), and afterwards perfected by the Rev. John Curwen, who became acquainted with the method in 1841. Its formal basis is the *movable-do* system; the seven usual solmisation syllables are employed, as follows; *doh*, *ray*, *me*, *fah*, *soh*, *lah*, *te*. The rea-

son for this departure from the ordinary spelling is, that the above is considered easier for English people to pronounce. In printing music, the initial letter of the syllable indicates the scale note. *Si* and *soh* having the same initial, the former is altered to *te*. Higher or lower octaves are shown by figures placed by the side of the notes, d^1, d^2, m^1, and s_1, m_2, d_2. The particular pitch of the key-sound is shown by the statement at the beginning of the piece, key G, key E♭, key A, etc. The minor mode is regarded as derived from the relative major, its tonic being called *lah*. Great use is made, in this system, of a *modulator*, a chart of the musical sounds. It presents succinctly the relative places of the notes of the scale, the relative minor modes, the chromatics, related keys, etc.

Transposing Instruments. Instruments which have their natural scale written as the *C* scale, while actually sounding a different pitch; the contra-bass sounds an octave lower, and the piccolo an octave higher than written, and it is natural and correct to speak of such instruments as transposing: but these transpose only to avoid leger lines; there are other instruments which transpose to other degrees than the octave, instruments which, therefore, give forth a different note from that which is written. The reason of this practice is found in the fact that wind-instrument players frequently perform on two or more different instruments of the same family, and, in order to secure uniformity of fingering and blowing, the system applied to one is applied to others; for example, the English-horn, which is a larger oboe, is notated as that instrument, and the performer who is accustomed to the oboe will play the English-horn in a similar manner, but it will actually sound a perfect fifth below the notes which are written. The clarinets, in the same way, are all written alike, but the C clarinet only, sounds the notes as they are written, the B flat clarinet sounding a tone below, and the A clarinet a minor third below. The horns (except C alto) the trumpets, and cornets (except those in C), the B flat bass clarinet, and other instruments, are treated in this manner, sounding notes of a different pitch from those written.

Trill (Ger., *Triller;* Fr., *Trille;* It., *Trillo;* in England, *The Shake.*) Its sign is *tr* or *tr* ∿∿∿, and it consists of a rapid alteration of the printed note and the next note above, to the value of the printed note:

In the eighteenth century the trill always began on the *upper* note, as in the second example, but early in the nineteenth century Hummel established the rule of beginning with the principal note. Bülow returns to the older method in most of his editions of the masterworks. Yet we think the Hummel method, to begin the trill upon the principal note, the better one. The interval is according to the scale, unless otherwise indicated by accidentals, therefore, it can be either a tone, or a

semi-tone. The wavy line indicating the trill is as old as the time of the *Neumes* (see *Notation*). *Grace-notes* before or after a trill form part of it and are played in the same speed as the trill itself. A trill generally ends

with a turn, especially if it has the rhythmic value of a half-note or more, and if it occurs in an ascending passage (in descending passages the final turn is sometimes omitted) and this turn is indicated by two *grace-notes*, the note below and the principal note, written after the trill; these two notes, added to the last beat of the trill, form a turn, naturally. The concluding *grace-notes* are often omitted in careless notation, therefore it is important to remember this rule. If the trill is begun on the auxiliary note (the upper note) the unequal group at the close disappears. See also, Dannreuther's "Musical Ornamentation," and Fay's "Ornaments in Music."

This arose from the custom (in the seventeenth and eighteenth centuries) of placing two *minuets* in contrast in a single form. This second *minuet* being generally played by the wood-wind in three-part harmony, soon received the name of *the trio*, a name which is applied to it still, although it is no longer necessarily in three-part harmony. The trio is generally *cantabile* in character. The trio appears in *marches*, *walzes*, *gavots*, *minuets*, and much other light music in the *minuet* (or *song form with trio*) form.

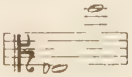
Trombone. (Ger., *Posaune*, It. and Fr., *Trombono.*) This brass instrument is made on two different systems. The valve-trombone lengthens its tube by means of keys which open extra crooks of the tube and thus lengthen it, the slide-trombone has no keys, but is made in two sections, the tubes of which are caused to overlap, so that the player, by drawing them out, can elongate the instrument, and cause it to give different series of tones. The natural tones are those produced with closed slides, but in the slide-trombones there is little difference in quality between these and the tones produced with open slides, since the shape of the tube remains unchanged. The trombone with keys is the easier to play, but the slide-trombone has the better tone. The slides are drawn into six positions, each one being a semi-tone lower than the one preceding, thus lowering the pitch of the instrument a diminished fifth. The trombone is at present made in three pitches, alto, tenor, and bass. The trombones are generally written in three-part harmony, and are treated as non-transposing. The alto trombone is called the E flat trombone, as, with closed slides, it gives the harmonic series of E flat, beginning not with the fundamental, but with the first overtone. The

general compass of the trombone is a little more than two octaves, the pitch of the instrument varying with the length of the tube. Thus an alto trombone, the part for which is written in the alto clef, can play all notes between



a tenor trombone all between

and a bass trombone all between

including every intermediate semi-tone, and six semi-tones deeper than the lowest natural tone (given above) by drawing the slides, or using the ventils. Each instrument can also sound the

note an octave deeper than the one given as the lowest in the above schedule. This is however very difficult to do, yet good players can attain this fundamental, by protruding the lips well into the mouthpiece, and can then lower the tone by means of the slides. These deep tones are called the *pedal tones* and must be sparingly used. The following would be the practicable pedal tones on a tenor-trombone:

The pedal tones have a growling, unpleasant quality. See Prout's "Orchestra," or A. Elson's "Orchestral Instruments."

Trumpet (It. *Tromba*, Fr., *Trompette*, Ger., *Trompete*.) A brass instrument with long and narrow tube and a rather shallow mouthpiece. The trumpet is often replaced by the cornet in orchestral music in America. The substitution is not a good one, since the cornet has a shorter, wider tube and a different tone quality. The trumpet's natural tones are a harmonic series

beginning on the second overtone of a deep series, while those of the cornet begin on the first overtone of a high series. The following is the natural series of a trumpet in C :

The trumpet is generally used in open tones, most of the muted tones sounding almost comical and very much like a child's toy, a fact which was taken advantage of by Wagner, in his "Mastersingers of Nuremburg," in the procession of the guilds, to usher in the toymakers. The C trumpets are non-transposing, and like the horns, the trumpets are scored in the key of C. There are trumpets in B, B-flat, A, A-flat, and G, transposing downwards, and others in D, E-flat, E, and F, transposing upwards. There is also another trumpet in F, sounding a fifth lower than written, and bass-trumpets are used by Wagner and others, in various keys, transposing even to a ninth downward. The B-flat trumpet is the most used. See Prout's "Orchestra," or A. Elson's "Orchestral Instruments." See also *Ventil.*

Tuba (Lat.) (*too*-bä) The name applied to the deepest saxhorns. The tuba is made in different pitches, the deepest being called the *contra-bass* (not to be confounded with the string instrument). The tuba is non-transposing, and is played with keys. It was the invention of a German bandmaster named Wieprecht. Sometimes a fine effect is attained by using a quartet of tubas, in which case the euphonium and the baritone, both saxhorns of a higher pitch, are employed, together with bass-tubas. Wagner, in the barbaric *Hunding motive* in "Die Walküre," makes masterly use of the tubas. Tubas are made with three, four and even five, keys; also the name of a powerful reed-stop in an organ. See *Ventil.*

Tuning-forks were invented in England in 1711, by John Shore, a sergeant-trumpeter in the army. Shore *dated* his forks, a proceeding that has aided much in ascertaining the old pitches. Tuning-forks are generally made in two pitches — A^3 (or one-lined A) for orchestra, and C^4 (or two-lined C) for pianos and organs.

Turn. An embellishment of four, five, or three notes, being made of the note above and the note below the principal note. It is called *Gruppetto* in Italian, *Doppelschlag* in German, and *Groupe* in French. Its sign, ∾, came from the neume notation of the dark ages, and showed the direction of the progression of the music. Draw a line through the following group, from note to note, and the origin of the sign of the turn will be at once perceived:

A line drawn through any sign of embellishment, ⇜, is to denote its inversion. The turn is generally played rapidly, but some deviation is made at times, in very slow and expressive passages. The turn takes its rhythmic value from the note over or after which it stands. The intervals of the turn are most frequently a tone for the upper, a semi-tone for the lower, interval,

but on the third and seventh degrees in a major scale they are a semi-tone above and a tone below unless otherwise indicated, while in a minor scale a turn on the fifth degree is generally made of semi-tones both above and below. Occasionally there are turns of a tone above and a tone below, but these intervals should *never* be played, or sung, unless clearly indicated. Such a turn is sometimes found on the second degree of the major scale (see Schumann's "Der Dichter Spricht," or "Novellette," in F.) The following general rules for turns may be given. If a turn follows a note and the next note is of a different pitch, play *four* notes in the last part of the rhythmic value of the principal note:

But if the next note is of the same pitch play but three notes in the same manner:

Let it be clearly understood that a turn *over* or *under* a note means something *entirely different* from the turn *after* a note, as illustrated above. A turn over (or under) a note takes its time value from the *beginning* of the note, and is played in two ways. If the note is of any length (even of moderate duration) *always* play three quick notes before the principal note, and accent the latter thus:

But if the note is quite short (and the tempo-mark must guide us somewhat here) let it dissolve entirely in a turn thus:

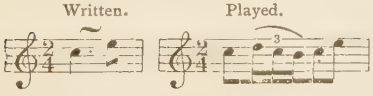
Written. Played.

The above two rules are far too little understood by young teachers, yet they are very simple, and almost invariable. If, however, the next note is of the same pitch, and the principal note is very short, let it dissolve into a turn, but now beginning with the principal note:

Written. Played.

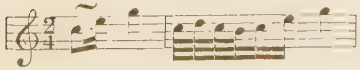
If it is over a long note follow the preceding rule, which is practically invariable: *A turn over a note of some length, is played as three quick notes before the principal note*, as in the example marked *N. B.* When a turn follows a dotted note and the next note is a single, short, unaccented note, filling out a rhythmical division of the measure, the value of the dotted note is divided into thirds; on the first third comes the principal note, on the second third, three notes of the turn are played, and on the last third comes the last note of the turn. This forms a group beginning and ending with the same note, and with a note of the same rhythmic value. Example:

Written. Played.



Occasionally some very slight deviation is made, and the first note played a little longer and the triplet a little shorter than above. If the dotted note be very short we can still follow the above rule, or we can play a group beginning with the principal note to the value of the simple note (without the dot) and then play the principal note to the value of the dot:

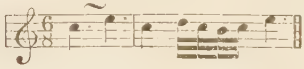
Written. Played.



Turns after long dotted notes, or after such dotted notes as constitute a regular rhythmic division of the measure, do not follow these rules, but are played as when the turn follows an ordinary note, as in the first example given:

Written. Played.

Written. Played.



It will be observed that in the last example the turn takes the value of the dot. Accidentals in turns can be written to affect either note. When it is intended to affect the upper note the accidental is written above the turn; when the lower note is to be affected, the sign is written below the turn. Accidentals can be written simultaneously both above and below, affecting both auxiliary notes. The inverted turn, written ∽ or ⌁, follows the above rules but begins on the *lower*, not on the *upper* note. Sometimes, when a note is dissolved into a turn (as in the example next following the one marked *N. B.*), particularly if the tempo is slow, it may be dissolved into *five* notes:

Written. Played.

Ventil (Ger.) (*fĕn*-tīl.) } Valve in
Ventíle (It.) (vĕn-*tē*-lĕ.) } modern wind-instruments for producing the semitones; also, a valve for shutting off the wind in an organ. The keys and valves upon modern brass instruments enable such instruments as the horn or the trumpet, which formerly gave only the broken scale of harmonics, to give an entire chromatic series of tones. The invention dates from the early days of the nineteenth century, and is claimed by several musicians and manufacturers. It is probably not entirely due to any one discoverer. The method of using the ventils, valves, or keys, is the same on *trombone*, *tuba*, *trumpet*, *horn*, or *cornet.* It is based upon the principle that the longer the tube the deeper is the tone. The keys open certain bends, or crooks, in the tube, which are shut off when the keys are not touched. The key nearest the mouthpiece opens a short bend; the middle key one still shorter, the third key (there are generally but three) one longer than either of the other two. These added lengths can be combined together if desired. Thus the natural tube would sound, not one tone, but a series. (See *Harmonics.*) The middle key would add a short length to the tube, and cause it to sound all these harmonics a semi-tone lower. The first key would give the series a tone lower; the third a minor third lower; the third and second keys combined a major third lower; the first and third combined a perfect fourth lower; and all three, a diminished fifth lower. See Elson's "Famous Composers and their Works," new series, article "Orchestral Instruments," for a full table of these changes. Those tones, which do not require the use of any key, sound somewhat clearer than those produced with one or more keys down.

Viol. An old instrument somewhat resembling the violin, of which it was the origin; it had six strings with frets, and was played with a bow.

Vióla. A tenor-violin; an instrument similar in tone and formation to the violin, but larger in size and having a compass a fifth lower. It is played in the same manner as a violin, and all points of violin execution are possible upon it, but its tone-color is more sombre. It suits best to the expression of a tender melancholy, or gloom. It has four strings, the two lowest of which are wired. It must be borne in mind that it plays the tenor part in the string quartet, and the English call it the tenor-viol, although the French give it the misleading name of *Viola Alto*. It is notated in the alto clef, and its four strings are tuned thus:

Its compass in orchestral use is about as follows:

Viol, bass. The violoncello; a stringed instrument in the form of a violin, but much larger, having four strings, and is performed on with a bow. See *Violoncello.*

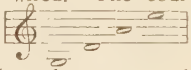
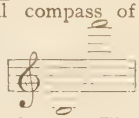
Violicembalo. A pianoforte played with a bow, invented in 1823.

Violin. A well-known stringed instrument. It is the most perfect musical instrument known, of brilliant tone and capable of every variety of expression. The violin has four strings, which are always spoken of as being of catgut, but are in reality made from the intestines of the sheep, or goat. The G string is wired. The four strings are tuned as follows:



The ordinary orchestral compass of the violin is about



although Wagner and other composers have demanded a greater compass from orchestral players. The soloist can play nearly an octave higher. The violin is always notated in the G clef, whence that clef is often called the *violin clef.* At times the quality of the tone is altered and its power much diminished by an appliance called the *mute*, or *sordino.* This is a clamp, which being placed upon the bridge, prevents that conductor from freely transmitting the vibrations of the strings to the sounding-board. When this is used it is marked *con sordino;* when removed from the bridge the music is marked *senza sordino.* The

violin can produce all embellishments and also all possible emotions from the deepest pathos to the wildest jollity. It is as varied in its expression as the human voice. Like the human voice, too, it is rather a melodic than a harmonic instrument. One can produce two tones simultaneously from the violin, and this is called *double-stopping*, but *single-stopping* or producing a single note at a time, is the real character of the instrument, which, therefore, like the solo voice, needs the support of other instruments. At times the bow of the violin is discarded altogether and the instrument plucked like a guitar; this mode of playing is called *pizzicato*, and is most effective on the open strings, or in the middle register, since it sounds woodeny and dry in the higher register. High tones of a peculiar, piping quality can be produced from the instrument by placing the finger very lightly on the vibrating string at a regular proportion of its length, thus causing it to vibrate in ventral segments and give forth one of its overtones instead of its fundamental. These tones, which require considerable skill on the part of the performer, are very properly called *harmonics*, but the Germans call them *flageolet tones* because their quality resembles that instrument. Double harmonics, that is double-stopping in harmonics, is one of the most difficult points of virtuosity upon the violin. For a full account of the technique of the instrument, its history and its repertoire see Stoeving's "The Violin."

The large, or bass violin; the name is also applied to an organ-stop of small scale, and crisp tone. The instrument took its name from the *Violone*, the contra-bass viol, and *Violoncello* means "little Violone." Of course to spell the word, as is sometimes done — *Violincellō*, makes nonsense of its etymology. The violoncello is as expressive as the violin but is masculine where the latter is feminine, having a broader, richer tone. It has four strings, the two lower ones being wired. These strings are tuned as follows and the compass of the

instrument is about All the violin points of technique (see *Violin*) are possible upon the violoncello. It is often abbreviated into *Cello*.

Violóne (It.) (vē-ō-*lō*-nĕ.) } The name

Voice. The sound, or sounds, produced by the vocal organs in singing; applied also to the tuning, and quality of tone, of organ-pipes, the *voicing* being a most important part of the organ-builder's work. The human voices are classified, from lowest to highest, as follows: bass, baritone, tenor, alto, mezzo-soprano, and soprano, or treble. The bass has an average compass from great F, or E, to one-lined e. (See *Tablature.*) The baritone from great A to one-lined f; the tenor from small c to one-lined a or b; the alto from small g to two-lined d or e; the mezzo-soprano from small a or b to two-lined g or a; the soprano from middle c (one-lined) to c in alt (three-lined c) or even higher. Sybil Sanderson was easily able to take g *in altissimo* (three-lined g) and in the eighteenth century there lived a singer, Agujari by name, who could go much higher. The above voices are subdivided, especially in operatic work. The deep slow-moving bass is called *Basso Profundo*, and, a little higher are the *Basso Seriō*, and the *Basso Cantante*. The light, playful bass is called *Basso Buffo*. The baritones are sometimes called *bass-baritone*, or *tenor-baritone* according to the tone-color of their voices. Tenor voices are divided into *Tenòre Eroico* or *Tenore Robusto* who sing broad and dramatic works, and *Tenore Lirico*, who sing light and graceful rôles, and possess flexibility rather than majesty. *Alto* and *contralto* have no longer any different meaning; they are identical; but when one finds an alto voice of smooth and graceful, rather than of broad, character, it is sometimes called a *mezzo-contralto*. It leans toward the *mezzo-soprano* voice in its characteristics. See *Tenor, Soprano, Descant.*

Waltz. The name of a modern dance originally used in Suabia. The measure of its music is triple, usually, in $\frac{3}{4}$ time, and performed moderately slow, or, at the quickest, in allegretto. The waltz was derived from the minuet. In the waltz, as in all the dance forms, the phrases are of eight, sixteen, or thirty-two measures, generally. The rhythm of the waltz is marked $\frac{3}{4}$, but it will be found that each alternate measure only, has a strong accent; therefore, almost all waltzes sound best if played as if they were written in $\frac{6}{4}$ rhythm. In a set of waltzes each waltz is generally in first rondo or song form, but in an extended single waltz the second rondo form, or the minuet form, can be used Berlioz and Tschaikowsky have used the waltz as a symphonic movement.

Web. Chron ♩ = 38″ Rh. (39⅛ Eng.) G. Weber copied this from a much older invention, a divided pendulum which was advocated by a Frenchman, Etienne Loulié, in 1696. ENGLISH MUSICAL TERMS OF TEMPO OR EXPRESSION, WITH THEIR ITALIAN EQUIVALENTS.

(In this table it has been deemed best to give Italian equivalents only. Although Schumann and Wagner use German terms in their works, and Berlioz and the César Franck school, French, Italian is the preferable tongue for musical terms, for the following reasons: 1st. It has priority. It was the first language used in this field, and has been in almost universal use for three centuries. 2d. It is impossible to allow each composer the use of his native language. If Liszt had used Hungarian, Tchaikowsky Russian, Dvořàk Bohemian, Grieg Norwegian, etc., we should find many more difficulties in the matter than in the use of a single language. 3d Musical notation is a single, universal, written language. Such a language requires an equally universal set of tempo or expression-marks. Exactly as in affairs of state, diplomats have chosen the French language as the universal tongue, music has chosen Italian as her language of tempo and expression-marks; and we urge upon every composer to further this unity by discarding English, French, or German markings, and using Italian only.)
